PREFACE.

It is not pretended that the sketches of character contained in this little volume present more than a few phases of American life, and those not the most prominent. That life, so new in its conditions, so varied and rich and full of interest, offers an inexhaustible field of study to the critical observer, and anything like an adequate presentation of it would require a wider acquaintance with men and things than I can ever hope to lay claim to. I have simply studied a type here and there as they came within my reach.

The American Pessimist and The American Epicurean are certainly not to be met with every day. The American Idealist is perhaps somewhat local, at least as I have sketched him. The American Man of Letters deals rather with the conditions of a literary life than with a literary man. The American Philanthropist alone is a type at once widely represented and distinctly American.

In treating these subjects I have unavoidably been brought in contact with the most far-reaching philosophical problems. Whether it is possible to deduce consistent opinions in regard to these problems from anything I have said, I do not know ; but if the reader succeeds in accomplishing this, he will do more than I can do myself. My

wish is rather to suggest and stimulate than to conclude : in the present state of science and philosophy it seems to me the more useful function.

I am afraid that some of the essays breathe a spirit of gloom and melancholy. This I am sorry for ; for I have come to feel that the two things most desirable and most to be cultivated in this world are love and joy, and I believe that it is possible to cultivate these things far more than we now do.

Of the Essays contained in this volume, three, "The American Pessimist," "The American Idealist," and "The American Out of Doors," have appeared in the *Atlantic Monthly* and are reprinted with the permission of Messrs. Houghton, Mifflin & Co. The others are now printed for the first time.

TYPES OF AMERICAN CHARACTER.

THE AMERICAN PESSIMIST.

PESSIMISM is a philosophy greatly in repute just now. Schopenhauer and Hartmann are in the mouths of many people who have not read their works at all, and of some who have read them with very little understanding. Many people who call themselves pessimists, however, hardly go the full length, or are conscious what they are proclaiming. To believe deliberately that the whole universe exists for nothing but evil, misery, and suffering; that there is a power, or an unconscious

force, which finds a pleasure, or follows a natural tendency, in the mere causing of destruction, is to believe something very contrary to the natural inclinations of humanity. For this is more, far more, than simple materialism; more than the mere belief that nature is a vast, inexorable machine, indifferent to the welfare of the sentient world. Materialism is consistent with a philosophy of great calmness and resignation, if not of joy. But to be a pessimist philosophically is to feel one's self in fierce and deadly antagonism with the universe, to hate with redoubled hatred all that is manifestly pernicious, and to see in all that is apparently alluring nothing but the hollow magic of a snare.

Nor is it easy to think that pessimism has ever been a prevalent system of philosophy, or indeed, until to-day, an

elaborated system of philosophy at all, at least among Western peoples, and outside of some vast and shadowy dream-vision of Asia. A theory so enervating could not have flourished among the pushing and practical races of Europe: it is too inconsistent with all action, too blighting to force and vitality of will. But pessimism as a mood, not as a system, is as old as the world, and as lasting as the thinking animal itself. [We are all optimists and pessimists by turns. We all have our after-dinner dreams, when life is suffused with a glow of rose. We all have our moments of dejection and despair, caused perhaps at times by some great grief, but full as often the result of a little over-fatigue, a jarring of the nerves, an indigestion, and we become temporarily as black pessimists as Leopardi.]

Yes, it is coeval with the birth of thought itself, the wild and sobbing shriek of overburdened grief, the cold sigh of indifference and *ennui*. We hear it in Job with a burst of passion: "Man that is born of a woman is of few days, and full of trouble. He cometh forth like a flower, and is cut down: he fleeth also as a shadow, and continueth not." We hear it in the terrible verdict of Ecclesiastes: "For who knoweth what is good for man in this life, all the days of his vain life which he spendeth as a shadow? for who can tell a man what shall be after him under the sun?" Lucretius overflows with it: —

"Surgit amari aliquid medio de fonte leporum."

Nor is this tone less familiar to the Christian than to the antique mind. Religious writers often dwell on the

misery of this world to bring out the attractions of the next, but the misery of this seems the prominent feature.

Nor is the cry of agony confined to dark and melancholy souls. It is more frequent with them, but the great master spirits of the world give way at times. Even Shakspeare, bright magician, skilled in loveliness and charm, had his moments of despair, — moments unknown to us except for the sonnets: —

“Tired with all these, for restful death I cry.”

Even Emerson, most optimistic of men, has touches here and there, if one looks for them, of vast discouragement.

When the warm autumn evenings settle down, who can resist this mood; or in the first days of bursting spring, when the world is flooded, drenched,

with vitality, and one asks one's self in terror, almost, For what is it all, for what, for what? — so resistless is the flow and tide of nature, so aimless and incomprehensible, so vast. The frail intelligence of man seems diluted in this wider element of semi-nothingness, of unprecipitated being. Again, on some clear October or January morning, it is as if the will of the universe were concentrated in the muscles of one's own right arm. Strange uncontrollable shifting of our moods and purposes!

But there is a pessimism which is a matter neither of mood nor of theory, but of temperament. Most men are born with a moderate view, taking things as they come, but some with a natural tendency to see the world all white or all black. Who does not know the constitutional optimist, who

is always well, always has been well, or always is going to be well; who is pleased with the present, satisfied with the past, full of gorgeous hope for the future; for whom it never rains, or shines, or blows, except for the benefit of some one; who sees what he calls the good side in all events, in all people; who makes one wish, sometimes, that some misfortune would befall him signal enough to make him "curse God and die"? Who does not know the constitutional pessimist, to whom the opposite of this description applies; who may not have intelligence or knowledge enough to accept the theories of Schopenhauer and Leopardi, but who carries them out in practice? Every inauspicious glance of Nature is especially for him. The dust flies for him, the frost bites for him, the whole planetary system re-

volves with the sole end of frustrating his purposes. One wearies, at times, of the optimist, but, except for those who are obliged to tolerate him, a prolonged cohabitation with such a pessimist becomes simply intolerable.

This is but a crude form of constitutional pessimism, however, — a form of indigestion, perhaps I should rather say, peculiarly attendant on the combination of a vigorous temperament with a lack of occupation. There is another manifestation of the tendency, infinitely finer and more subtle, — the only one, as I think, really worthy of the name. This species of pessimism is found, I suppose, all over the world; most intellectual maladies are, though this may never have been so highly developed as in our nineteenth century. But it has especially come under my observation

here in our own America; and it is as it exists here that I wish to describe it. Not that it is very common. Many of my readers will say they do not know such a person as I am portraying; but some will be able to lay their fingers on one instantly. The disease, too, is important, not from its quantity, but from its quality; it attacks some of the very clearest and richest and subtlest minds among us.

This pessimism is wholly different from the crude discontent and lack of harmony with surroundings that I have referred to above. Such a man as we are speaking of has too much philosophy, if I may call it so, too much pride, too large a view, to set himself in a pitiful and petty antagonism with the ample and eternal forces which go to make up what we call Nature. He has a suave indifference to small dis-

comforts that at times leads superficial people to confound him with the optimist; for he has few of those turbulent and fleeting bursts of temper which overcome the serenest of us. He faces great misfortunes and even small annoyances with the same inexplicable, unalterable smile, — a smile more fitted to move the looker-on to tears than to any outbreak of accordant mirth.

[No, the modern pessimist, the true, incurable pessimist, is not, perhaps, a pessimist at all. He does not rail, or curse God, or despise man. If his state of mind can be described, it is by saying that he has thought, not himself, but everything besides himself, into a shadow. He is a man who has embarked on the wide sea of intellectual discovery, and has found that for him it is a barren sea, blank, desolate, — a sea shoreless, where the

traveller voyages on aimlessly forever in a misty void. } He is a man for whom the fevered, passionate whirl of life, so fierce, so intense, so real, to other men, is but a disordered dream, — a dream of which no one knows the beginning, and no one can prophesy the end. He is a man to whom the present is a reality only in comparison with the utter darkness of the future and the past, — [a man to whom faith and hope are shadows, and charity is the emptiest and vainest of superstructures, from which all foundation has been eaten away.]

But, some one says, this is not pessimism. You are misusing the word, and disguising in flowery rhetoric something which should go by another name. But no other name will quite cover what I mean. Practical Epicureanism is a philosophy very popular

among us, as indeed it has been popular at all times and everywhere, though not always so openly proclaimed and without veil as it is to-day. The practical Epicurean is quite as much without belief as the pessimist I speak of; he is quite as free from prejudices as to morals or religion, quite as ready to disclaim adherence to inherited ideas. But he simply flings all these things aside. From his want of belief, when he reasons at all, he draws a solid and comfortable conclusion: Let us eat, drink, and be merry, for to-morrow we die. That conclusion is the basis, conscious or unconscious, of a vast deal of American life to-day, modified only by the fact that the American has not yet really learned how to enjoy himself, and seeks distraction in endless and feverish mental excitement rather than in the subtle

and judiciously husbanded pleasures of the senses.

Now, the life of our pessimist is as far from this as possible. [It is true that he has lost all faith, if he ever had any. He has long ago recognized that the intellect is a will-o'-the-wisp, kindling its fitful gleam, now here, now there, in the vast plashy meadow of perceptive existence, but leading to no sure and solid foothold, drawing the weary wanderer only deeper and deeper in the mire. Yet, knowing this, he cannot resist the fatal charm. He has tasted the alluring sweets of abstract reverie, and he can never give them up. Once caught in the toil of that enchantress, there is no escape, — she, the true Circe, who, instead of enslaving men to the joys of sense, turns those joys themselves into the shadow of a shade.] Yes, even if the

pessimist would shut up the cavern of his mind and strew it over with the roses and the charm of life, he cannot. Still, still he is haunted with the consciousness of the drear abyss beneath. It is true to him, too true, that tomorrow we die, and, in the face of that fact, how can he eat, drink, and be merry?

But am I not describing an agnostic? To a certain extent, yes. The pessimist, in this sense, does deny the possibility of real knowledge, cognition of the Absolute, as does the agnostic. Yet no! He does not deny or assert anything. He himself knows nothing about the Absolute, but others may. After all, the agnostic belongs to a sect, a dogmatic sect, a sect ready for the most part to decry what it calls the superstitions of other people. Now, to our pessimist, dogmatism is,

of all things, hateful. Just because he believes nothing, he is alive to the possibility of believing anything or everything. The most monstrous superstition, except as it involves intolerance and cruelty, is to him as worthy of respect as the refined abstractions of the Hegelian. As faiths, they mean to him nothing; as phenomena of the human intelligence, they are alike curious objects for the ceaseless play of thought.

It is true that we might fall back on the term "sceptic." But that, also, implies a system, bears with it some inference of Pyrrhonism, and a hardened determination to question everything whatever. So natural are theory and a creed to humanity that it erects even its profoundest doubt into a dogma.

Therefore, until something better is

suggested, we still must call the subject of our examination a pessimist. He is not a shrieking fanatic, like Leopardi or Schopenhauer, who parades his own despair in the eyes of an unsympathetic world. Such demonstrations seem to him crude and unwarrantable. The deepest mystery of things is too august to be hailed with such abuse as a fretful child showers upon its nurse. But his pessimism is rather an indefinable shade of gray which pervades his whole view of life, — silent, uncomplaining, but profoundly hopeless.

It is here that the peculiarity of the American type must be taken into account. Men such as I have been describing are to be found all over Europe, all over the civilized world. In France they are very numerous, and the great French literature of to-

day is largely built up by them. Indeed, the tradition of the race began long ago in France, in more or less disguised forms; clad in gorgeous rhetoric in Chateaubriand, touched with fevered passion in Sénancour, nursed to his own destruction by Maurice de Guérin. It is the ground tone of the great French realistic novelists, Stendhal, Balzac, Flaubert, the De Goncourts, Zola, the half-French Turgeneff; and, in the younger generation, of such men as Paul Bourget and Guy de Maupassant. But there is an immense distinction between these men and their American fellow. He is as profoundly and completely sceptical as they are; but, owing to a difference of race, or, it may be, to the traditions of Puritanism that still linger in his blood, he is less brutal than they, — is, in fact,

as far as possible from brutality. From their complete disbelief in all moral law, they deduce a profound viciousness and uncleanness of tone and habit, not from any great pleasure in the enjoyments of the senses, but simply from hatred of the conventional, the *bourgeois*. To him such licentiousness is wholly repulsive, it offends his taste; he lives and thinks as purely as a fanatic.

Yes, he has inherited many things from his Puritan ancestors, this child of the nineteenth century, whom they would spurn and scorn more even than the fiercest heretic or the most godless debauchee. Their glowing love of a saintly ideal still lingers in his veins, possesses him at times with a wild desire for the beauty of holiness, making the void only blacker and bleaker when it fades away. He has inherited

from them a fastidious scrupulosity of conscience, which haunts him in minute details, even when conscience itself has become to him an idle illusion. Vices he has none. Faults he may have, arising from indifference and lack of enthusiasm; but the more passive virtues, gentleness, tenderness, mildness, infinite toleration, — no one has them more than he. These things make him beloved in spite of the chill which he casts over everything, for he is ready to listen to other people's joys and woes, and not burden them with his own. Indeed, simply to meet him and talk with him, you would never become aware of the profound darkness at the bottom of his heart. You would think him ready to agree with your own Methodism, or Episcopalianism, or what not. Only rarely, if you are unusually penetrating, there would

be a glance that would put you on your guard.

Is he then hypocritical, inconsistent? Inconsistent, yes. I have heard a Philistine described as one "who lives from convention, not from conviction." If the definition is accurate, our pessimist is a thorough Philistine; for he abhors convictions, and has none of any kind whatever. Yet the poor man must live.

And he does live. If you ask him, he will probably say that life brings him, on the whole, more misery than happiness, by far. Yet he lives, either because he is mistaken, or because the tremendous unreasoning instinct that makes us cry out for life — life, good or bad — predominates over him as over the rest of us. He lives, often, to a gray old age, and sees his children around him. There are bright spots,

too, even for him, sunny nooks in an autumn day, where he can fly the cold north and dream that there is something that is not a dream; something stable, worth grasping, worth loving; something that will not fade away. But, for the rest, he bears his lot as he can, without murmur or complaint; looking on at the vast and varied banquet of the world, from which he alone goes away unsatisfied; gazing, an idle and yet not an uninterested spectator, at the curious and futile show which the vagaries of language and the traditions of our ancestors have taught us to call life.

THE AMERICAN IDEALIST.

THE word "idealism" is in many minds connected with a philosophical system that is mainly negative. The critical and destructive portion of Kant's work has become so widely known as the basis of German philosophy that an idealist is supposed to be one who believes the whole empirical world to be a delusion; who sees no reality but his own thought, and cannot rest even that reality on a solid foundation; a nihilist, in short. Could anything be more mistaken? Is there a philosophy more triumphant, more overflowing with faith, more world-storming, than true ideal-

ism? Is there a man whose convictions are firmer, more self-asserting, more vigorous, more joyous, than those of the true idealist? Instead of doubting the existence of things, he is penetrated with the intensity, the self-demonstrating sureness, of reality; he cannot resist it if he would; every moment of life is to him crowded and packed with certainty, though perhaps not so much with the certainty of material phenomena as with that of moral and spiritual facts, of *ideas*. He is by nature a believer. Everything shows, I think, that Kant himself, in spite of his "world-overturning" speculations, was the profoundest of believers.

At the same time something can be said for the common view. If the idealist does not dissolve the world in his own mind, he projects his own

mind upon the world. He lives among theories, among types, to which facts must accommodate themselves or suffer for it. He does not love inductive methods, prefers working *a priori*. How can things be except as they ought to be? Every idealist constructs in his own way a skeleton like the great logical schemes of Plato or Hegel, round which the world of perception must flow gently, and shape itself in a fleshly garment, sometimes beautifully draped and adjusted, sometimes falling in harsh folds with a melancholy stiffness. In this sense it may be said that the idealist destroys the world, and builds it for himself anew.

The division on these lines into idealist and realist absorbs all humanity. There are the men who see things as they are and the men who see them

as they would have them. To put it more fairly, there are those who take each fact of experience by itself, letting it get connected with other facts as it can; there are those who find for every fact its proper place in the vast and perfect order of nature. These two different classes can never quite understand each other or work together. In one the subjective is subordinated to the objective; in the other the subject rides triumphant and supreme, the object being reduced to servile insignificance.

The scientific tone of mind, the modern critical spirit, is distinctly realist. It aims to make itself a mere passive instrument, played upon, like an Æolian harp, by all the influences of the outer world. Indeed, the intellect pure and simple does not favour idealism, which springs essentially

from the moral side of our nature. The intellect is always striving to be impersonal; the heart, the emotions, are what drive us, with feverish intensity, to assert ourselves. Now, the intellect has become more predominant in the nineteenth century than it has ever been before in the history of the world.

Yet what a curious illustration of nature's revenges is the spread of pessimism side by side with this mighty development of the intellect! Pessimism is idealism turned inside out. Every pessimist has in him the elements of an enthusiastic idealist; for if he did not imagine a more perfect world, why should he find so much fault with this? Only the clear-eyed intellect thinks the ideal world hopelessly far away; and the dull, muddy world about us seems vile in compari-

son. A French critic remarks: "I wrote it twenty-five years ago, 'the supernatural'" — let us read, the ideal, — "'is the sphere of the soul,' and I see no reason for changing my mind. The only thing I would add now is this melancholy reflection, that one may demand the Absolute without being sure of getting it. The child, also, cries for the moon, when it has seen the reflection in a well."

Of the numerous spiritual types that humanity presents, some are permanent and some are transitory. A good example of the latter is the miser. There is plenty of meanness, of niggardliness and foolish sparing, in the nineteenth century; but you do not often find, in this country, at any rate, a man who hoards gold simply for the pleasure of counting it, of eyeing it, — who grudges equally the spending

of one dollar and of a thousand. People seek to acquire money, as they have always done, because money gives the means for gratifying their passions, because it gives power; but they do not often seek it for the actual accumulation of precious metal. This may be owing to the colossal size of modern fortunes, which makes money less a reality than a dream; it is more probably caused by the introduction of paper currency and the banking system. The clink of gold affords a pleasure not to be found in fingering greenbacks. Certain literary figures have lost their interest for us on account of this change, — figures like Molière's Harpagon and the heroes of many of La Fontaine's fables.

On the other hand, some types belong to this century only, or to this and the preceding. The philanthro-

pist is one of these, — the man who devotes his life to working for mankind not from any lofty religious principle, sometimes even with no great belief in the goodness or worth of humanity; doing it either from pure sympathy and love, or because he has no other means of satisfying a restless desire for action. Another modern type is the critic, perhaps I should say the scientist, who has reduced his own personality to a minimum, and lives on curiosity; who thrusts himself into the spiritual garments of other men, or probes the secrets of nature, drawing into his own veins the blood and life that circulate elsewhere.

But idealists are confined neither to the ninth century nor to the nineteenth. The first man who framed for himself another life beyond this world

or outside of it, the first man who laboured and toiled with hand and brain to bring about a paradise in the future, or dreamed of a paradise in the past, was the first idealist. In spite of all negations, of all iconoclasms, of the downfall of this creed and of that creed, the world will never see the last. The ideal is infinite in its persistence, infinite in its protean power of reëmbodiment, remanifestation. All it demands is faith in something, belief in something, beyond the passing sensuous impression: give it that, and it will conquer the world. For its advantage over positivism and scepticism consists in its being affirmative, in its perpetual self-assertion. Those who follow it follow undoubting, absolutely mastered. In Heine's words, — and let me remark that Heine wrote "Idea," and not "ideas,"

as it stands in the epigraph of one of our magazines: "We do not seize upon the Idea; the Idea seizes us, and enslaves us, and lashes us into the arena, where we fight for it like gladiators, whether we will or no." What a masquerade this worship of the Idea gives us, sweeping down in bright order through the shadowy past! The obstinate hope of the Jews for their Messiah, the patriotism of the Greeks at Thermopylæ, the Christian martyrs, the glittering Crusades, the Renaissance, the sanguinary passion of the French Revolution, — these are the gleaming points in the great web of enthusiasm for all causes and all faiths. Believe! Believe! Only believe! And all things shall be added unto you.

It will be seen from the above enumeration that nations are idealists as well as individuals. Is not the Bible

the monument of indomitable idealism in a whole race?—a race narrow, indeed, in its conceptions, not much concerned with the intellectual problems that please the Aryans, yet intensely and fiercely moral, and showing its idealism in the positive force of its morality, in not being content with perfecting itself, but in being determined to overcome the whole world. Has idealism ever been manifested with more energy and splendour than in the lament of Job, or the denunciation of David, or the lovely visions of Isaiah? “For, behold, I create new heavens and a new earth: and the former shall not be remembered, nor come into mind.” Is not that the text of the idealist everywhere? “But unto you that fear my name shall the Sun of righteousness arise with healing in his wings.” For that rising not

only Jew but Gentile waits, has waited, and will wait forever, with the fervour of an unconquerable hope.

A blind enthusiasm of the same sort, though grosser in its materialism, was at the bottom of the great Mohammedan movement. The intenser form of idealism, at least in religious matters, seems to be found outside the Aryan races, which agrees with what I said above as to the results of intellectual development in individuals. Even among Aryan nations, however, there are, as one can see, vast differences in this respect. Perhaps, taking into account the fact that we must live in this world as it is, with all its imperfections, the Greeks, in their best days, came as near to a just harmonizing of the real and the ideal as is possible. The Romans, on the other hand, were, as a people, positivists

beyond any the world has seen; positivists to such a point that, with the exception of two great poems, — even those largely imitative, — they alone of all important nations, ancient or modern, left behind them no trace of original work in any one of the fine arts.

Among modern European nations, the English are most like the Romans, in this as in other things. Their poetry saves them from the same degree of reproach; yet their poetry is at its best in the drama, and the drama is the form of poetry that lends itself least to idealistic purposes. The French are more distinctly idealist. Indeed, we may safely say that, generally speaking, the Kelts always are so, while the Teutonic races are soberer, more practical. A moment's consideration of English history and

character compared with French or Irish will suffice to prove this.

To return to individuals. This enthusiasm, faith, takes naturally very different forms in different minds. In some it is calm, serene, gentle; works upon mankind by mild and sweet persuasiveness, by an influence that spreads unconsciously, yet all the more powerfully. In others it is stormy, impetuous, rejoicing in difficulties, rejoicing in struggle and sacrifice, seeming to acquire firmer conviction by the sense of victory hardly earned. We need not go far for examples of both these classes. Where could we find the contrast better illustrated than in the Founder of Christianity and its greatest apostle? Paul cries, not once, but again and again, in varying words: "For I delight in the law of God after the inward man: but I see

another law in my members, warring against the law of my mind, and bringing me into captivity to the law of sin which is in my members. O wretched man that I am! who shall deliver me from the body of this death?" How different, ah, how different is this other tone! "Take my yoke upon you, and learn of me. . . . For my yoke is easy, and my burden is light."

Examples of such opposite tendencies might be multiplied infinitely. In literature, take, for instance, Byron and Shelley. Byron was certainly an idealist in his way; but he would have been inclined to mend the world by shattering it to pieces. Shelley, whose "passion for reforming the world" marks him as one of the most intense idealists of our century, was the sweetest of men.

It is clear enough that the idealist is not necessarily either moral or religious. What he must have is an abiding and inspiring enthusiasm for something that demands devotion and sacrifice; this something may be religion, it may be humanity, it may be beauty, it may be one's country, it may be power, it may be wealth. The distinction lies not so much in the object as in the spirit with which it is pursued. Alexander was an idealist; Cæsar was not. Shakspeare, so far as we can judge, was not; Milton was. Napoleon, in spite of his hatred of *idéologues*, was an idealist himself. There is no way to make this felt more clearly than by contrasting him with Wellington, in whom the genius of his country may be said to have been embodied, as, in a certain sense, that of France was in Napoleon. The ideal-

ist may, then, be selfish in as high a degree, as absolutely, as he may be virtuous. Indeed, even when his pre-occupation is wholly with what is high and pure, he may be caustic, crabbed, unlovable, to those about him. He often is so, with his impatience at not being understood, his keen perception of the woful difference between the world as it is and the world as he would have it.

This is the limitation, the negative side. Conviction, in this world, so often brings intolerance. The French writer I quoted just now says elsewhere: "The fundamental dogma of intolerance is that there are dogmas; that of tolerance, that there are only opinions." But the Idea is more than a dogma, it is a fact, in the mind of the believer. How can he look upon it as a mere opinion, discutible, dis-

putable? How can he put himself in the place of another, disown his own position, admit even the possibility of being wrong? He works by sight, not by faith; by an intuition that allows no question and no doubt. Hence the sweetest of idealists must think you ignorant and to be pitied, if you differ from him. He will not abuse or revile you, but he will regard you at best as an object for conversion. The idealist who is not sweet will not refrain from expressing his opinion.

To come to what is properly American. The typical American is, or was, English in his origin, and I have said that the English are not idealists. Furthermore, it was the Puritans who emigrated to this country, and the Puritans embodied what was least idealistic in the English nature. It is bold, perhaps, to say so, but I am

convinced that what makes the Puritans unattractive, in spite of their virtues, is this very fact, that they were not idealists. For the most part, the English religious movement of the seventeenth century was a revolt of common sense, as indeed was the Reformation in general. The English political movement of the seventeenth century was of the same nature, as one may see by contrasting it with the French Revolution, Hampden with Robespierre. It may be said that if this be the case the English were blessed in not being idealists. With that we have nothing to do in this simple search after facts. What I have asserted above is exactly what Matthew Arnold meant when he spoke of Luther as the "Philistine of genius in religion," Bunyan as the "Philistine of genius in literature," Crom-

well as the "Philistine of genius in politics," all taken from the group of men connected with new-born Protestantism.

The Puritans who left England for America were perhaps more idealistic than those who remained at home; yet the most striking thing about the founders of New England is their stern good sense. It has stuck by their descendants till the present day. The characteristic religion of New England, Unitarianism, is the religion of good sense, the least idealistic religion that has ever professed to connect itself with Christianity.

The American of to-day, however, either from race intermixture or from influences of climate or of institutions, is manifestly different from his English progenitor. He is quicker, keener, less conservative, though still

conservative. His intelligence is inventive, and proverbially seeks rapid ways to come at things. He is extremely practical, — more than that, material; dazed, it would seem, by the immense resources of his country, by the immense opportunities it affords for accumulating wealth, and with it power. He is, for the present, wholly absorbed in the means; careless of the end, if there be an end at all. Yet his spiritual eye is shut rather than blinded. If you can open it, it is wonderfully quick and penetrating. He is restless, too, dissatisfied with traditions, with old-world beliefs, doctrines, ideas. He half thinks there should be a new religion, as vast and modern as his needs. We perceive the same restlessness in the later Roman world, with somewhat similar conditions. Men were

dissatisfied with their old faith; all vital belief in it had disappeared; everywhere they were doubting, wondering. Before the spread of Christianity, all sorts of religions from the East—Mithraism, for instance—found numerous followers. In such a soil Christianity could not but grow vigorously. The Roman world resembled us, indeed, only in the sudden increase of material prosperity. The newness of conditions is far more general with us than it was with them. Yet here, too, what a hold has been taken by Spiritualism, by Christian Science, by the mystical philosophies of India, even where they are only half, if at all, understood!

When the American is possessed by the Idea, he is possessed by it thoroughly; not with a Celtic unreason, but with an enthusiasm that

seems quite out of harmony with his ordinary half-sceptical self, and that goes great lengths. The most interesting point in the history of American thought is the transcendental movement of the first half of this century, which was idealism incarnate. Practically, it showed itself in that curious experiment, Brook Farm, which was an attempt to realize what has been in one form or another the social Utopia of all idealists; an attempt to overcome the biting stress of individualism, to "pool," as the railroad men say, the interests of all humanity; an attempt—which failed. What was far more serious, and what did not fail, was the great antislavery movement, as truly a result of idealism here as was the French Revolution in Europe, and managed in a far purer spirit. It has been argued, to

be sure, that the English got rid of slavery with less idealism, but without bloodshed. The cases were, however, very different.

The list of great names connected with all these movements is not a short one. Active in the antislavery agitation, we have Garrison, Phillips, Sumner. More especially connected with transcendentalism, we have the group that centred in Concord: Alcott, about whom critical judgments differ most; Margaret Fuller, pathetic in her actual fate without any addition of romance; Thoreau, robust, self-asserting, not to say egotistical, — more arrogant than some of his comrades, but touched with a fine and peculiar genius most nearly allied to the greatest of them all. Lastly, rising with his whole figure above these, who are only grouped about the pedes-

tal upon which he stands, comes the representative American idealist, — one may almost say the representative idealist of all times and nations; the man who came nearest to uniting the high enthusiasm of the saint with the calm vision of the seer, who touched with a holy fire the speculations of Plato and Hegel, who blended the philosophy of Germany with the mysticism of Asia; the man who, for the first time in nineteen centuries, owned the all-importance of religion, and yet looked forward, and not back, — Ralph Waldo Emerson. No doubt the Puritan lack of imagination does make itself felt in Emerson, at times almost repulsively; no doubt minds of another type do and must weary of his eternal optimism; but never was there a truer servant of the Idea than he; never has the high enthusiasm of

that service been better voiced than it so often was by him.

“The soul is not a compensation, but a life. The soul is. Under all this running sea of circumstance, whose waters ebb and flow with perfect balance, lies the aboriginal abyss of real Being. . . . Nothing, Falsehood, may indeed stand as the great night or shade on which, as a background, the living universe paints itself forth, but no fact is begotten by it; it cannot work, for it is not; it cannot work any harm; it cannot work any good. It is harm inasmuch as it is worse not to be than to be.

“In a virtuous action I properly am; in a virtuous act I add to the world; I plant into deserts conquered from Chaos and Nothing, and see the darkness receding on the limits of the horizon. There can be no excess to

love, none to knowledge, none to beauty, when these attributes are considered in the purest sense. The soul refuses limits, and always affirms an optimism, never a pessimism."

Essay after essay is but one continuous joyous proclamation of the permanence, the inexhaustible vitality, of the Idea.

As was natural, this vigorous and potent personality influenced a great number of people. Many of them sought an expression for their enthusiasm in literature, — some successfully, the majority not so. But there were others who were contented to live quietly in the calm and pure light of their high faith, making no attempt to communicate it, unless indirectly by a certain spiritual atmosphere that constantly surrounded them. One such I have in mind: a

man who was for many years, for life almost, an intimate friend of Emerson's; who had imbibed his spirit thoroughly, yet united with it a peculiar gentleness and sweetness all his own. His nature was feminine in its delicacy, subtly sensitive to all impressions, — morbid in some ways, unquestionably. He was at times the slave of a conscientiousness that ruled him tyrannically, exposing him to ridicule from those who did not understand; but the fine purity of his character, his imaginative sympathy, his infinite patience, tolerance, readiness to find excuses even for those he disapproved of, his loyalty and devotion to the people and the ideas he loved, above all his supreme unworldliness and indomitable conviction of the truth, — when shall we look upon his like again?

The men of that generation have passed away. Have their enthusiasms vanished with them? I do not believe it. Material prosperity has lured us all more or less from the things of the spirit. The high light of thought and devotion seems obscured by the mist of lower passions, sordid rivalries, eager greed. But, as a people, we are not—as yet we are not—corrupted or decadent. We are ever on the watch for what points upward, full of generous impulses, ready sympathies. Above all, we are hopeful; we look forward. We feel in a manner bound to grow to the great destinies of a great country. All sorts of speculative opinions find a ready acceptance. I have alluded to Christian Science, and the fascination exercised by half-mystical theories about new discoveries in the nature of

mind. Politically, the idealistic tendency shows itself in the projects of the Nationalists, the followers of George and Bellamy. It shows itself also in agitations for woman's rights and objects of that nature. Indeed, it may be said, in passing, that the most typical American idealist is a woman; idealism, with its merits and defects, being more natural to women than to men.

No, from whatever source derived, whether it be a reflection of Divinity in the human heart, or a mere figment of the imagination projected on the realm of "Chaos and old Night," the Idea can never die, never lose its influence over mankind, never cease to be the mainspring of all that is accomplished in the world, of all progress, of all virtue, of all happiness. It clothes itself in many forms. It

puts on and casts off religions and philosophies like worn and faded garments. All these change, but the Idea remains the same. Something outside, something beyond, something larger than itself, humanity must have to strive for, to hope for. It would be useless to oppose this tendency, even if it were desirable. The pessimist will revile it, cherishing it all the while more than any one else. The critic will find in it an ever-changing and infinitely curious object of study. The wise statesman will seek to guide it and profit by it. But he who is a born idealist himself will see in its vitality its justification. He will bow down with his whole heart and soul in infinite worship before the unchanged, immortal spirit of virtue, loveliness, and truth, which, underneath the shifting illusion of the world, is all that is firm, all that is abiding.

THE AMERICAN EPICUREAN.

DISTINCTION is the mightiest implement of the wise, and the plaything of the idle. Allow me to amuse myself with it for a moment. An Epicurean is one who enjoys life, who lives, so far as possible, by and for enjoyment, and who at the same time analyzes his pleasure and philosophizes about it after his own fashion. Epicurean and materialist are often confounded; but the materialist is simply absorbed in what is external and material. He does not philosophize about it; he does not even always enjoy it. He may be bound down and tyrannized over by it, so that he hates

it, but cannot escape from it, like some men of business, or even some philanthropists ; for I have known philanthropic materialists, but never a philanthropic Epicurean. Nor are Epicureanism and paganism identical. Here, too, there is the difference of underlying analysis and thought, which makes, as it were, the lining of the Epicurean's pleasure, and gives it a sort of bitter-sweet of its own. He observes and studies himself even in the midst of the keenest delight. The pagan, on the other hand, enjoys without observation or analysis. He has the frank, free gaiety of the fauns of Rubens, who pass unremittingly from sleep to laughter, and from laughter to sleep, if, indeed, they sleep at all.

It is a notable, though perhaps not wholly enviable, title to reputation to have given one's name to a sect like

this ; and it is to be wished that we knew something more definite of the life and doctrines of Epicurus, which have come to us only through the distorting media of his disciples' writings. We have, however, every reason to believe that he was a gentle and tolerant man, which is an excellent thing in a philosopher, and for my part I am happy to accept the portrait given us in Landor's celebrated dialogue, where we find, indeed, certain amiable weaknesses, but altogether outweighed by attractiveness and charm.

When we pass to Epicurus' greatest disciple, what a difference ! And how little we find in the *De Rerum Natura* those qualities which we associate with the Master, and still more with the name *Epicurean* in modern times. Is it probable that Lucretius ever enjoyed himself in the mild sense in

which the word is used by ordinary mortals? Perhaps he knew the fierce delight of struggling with great mental problems, of toiling up vast slopes of argument from the summit of which, when one has reached it, one beholds nothing but barrenness and death, of moulding and straining a hard language into magical harmonies and long waves of echoing sound. But Epicurean — where is the softness, where the grace, where the roses and the smiles? Lucretius rushes at pleasure, battles with it, crushes it, kills himself in seeking to possess it. Some of us do that to-day, but we are not called Epicureans.

But there is a classical representative of the habits, if not always of the doctrines, of Epicurus, who harmonizes much better with our preconceived ideas on the subject; I mean, of

course, Horace. It is a pity that Horace is out of fashion just now. When we read Latin at all, we read Catullus and Lucretius, which is well. But perhaps Virgil and Horace will some day come in again, without the others going out. No one claims for Horace the lyrical passion of Catullus ; but he has lyrical qualities of his own, flawless grace, a perfect hold on his subject, a style perhaps more subtly and delicately intellectual than that of any other writer, unless it be Petrarch. Above all, he had precisely the Epicurean quality we are speaking of, of taking all the pleasures of life, great and small, as they came within his reach, and at the same time that he enjoyed them with the keenest zest, of reflecting on them, classifying them, appreciating, too, their fleetingness, and emptiness, and vainness, if only

there were anything better to replace them. What profound wisdom he has with what endless tolerance and sympathy ! He does not rant and tear a passion to tatters, unless, alas, when hired to write conventional morality by the powers that be ; and even then you feel that he sings a little after the fashion of Dodor in *Trilby*, when entertaining his inamorata with psalmodic selections.

We shall hardly, I imagine, find much Epicureanism in the Europe of the Dark and Middle Ages. Materialism and brutal paganism, brutality even beyond paganism, of course, abound. We shall see enough of the love of pleasure, but very little of philosophy ; unless we imagine to ourselves hidden away in the dim corner of a mediæval monastery some friar of orders gray, who has fled thither as to a quiet

refuge from a turbulent and barbarous world, who passes his days in reading the classics, with a flask of red wine and a flask of white, a pretty niece, and a gentle smile at the follies and vagaries of mankind.

When we come to the Renaissance, on the other hand, we shall find Epicureanism in its fullest flower. Even here we must distinguish it from paganism; for the great characteristic of the Renaissance is chiefly a wild rush for the delights of life so long obscured and hid away. Every one thrust in for his share, and the common herd then, as always, did not examine nor inquire into the nature of its deeds. But the fifteenth and sixteenth centuries were peculiarly a time when men of intellectual power plunged into every kind of extravagance and excess, and then they all, more or less,

in the true meaning of *reflection*, turned to look back upon themselves. Chief among these stands Montaigne. We know Montaigne as a sceptic. It is the name under which Emerson has treated him, and doubtless represents accurately a part of his mental attitude. But Epicurean suits him better still. Epicureanism does, indeed, presuppose a certain amount of theoretical scepticism; but the typical sceptic, even if he is not a professional philosopher like Pyrrho, is surely much more philosophical than Montaigne. Scepticism implies constant and consistent thought, a contact with the great problems of life, which is too apt to bring a pale brow and an anxious eye. The rich, rubicund nature of Montaigne and Horace has nothing more akin to philosophical scepticism than a good-natured mistrust of dogmas

whether one's own or other people's, and a fancy for amusing oneself at the fireside by stripping the idols both of cave and market-place down to a bare skeleton of nothing. But that keen observation of human life coupled with an endless delight in it, which is the charm of Horace, reappears in Montaigne, free from any trammels of poetical form, abundant, varied, lighted up with infinite humour, illustrated by boundless learning, now playing wantonly on the surface of common needs, now plunging down into the deep recesses of wayward passions, but always smiling, always serene, always tolerant, always free from conventional prejudice.

The nearest English equivalent of Montaigne is Robert Burton of the *Anatomy of Melancholy*. That wonderful book, bristling with quotation and illustration, is an epitome of the

Renaissance in many ways. At the same time Burton's description, depiction of the pleasures of life, is not, like Montaigne's, that of a man who has touched and tasted; it is that of a scholar and something of a pedant, who eyes the promised land wistfully from without, who listens eagerly to the enthusiasm of others, and very much exaggerates in imagination the possibilities of what he might enjoy, but himself never quite dares enter. Nor is Burton singular in this. Epicureanism is not thoroughly to the Anglo-Saxon taste. The English life may have its period of brutal and unthinking self-indulgence, but there comes a moral reaction from the ever-present Philistine within us, of which the grandest example is the respectable old age of Shakspeare as a worthy, harmless, revered, and thrifty burgess of Stratford.

In this rapid survey we can touch only the summits. If we pass over the seventeenth century with its group of men of letters, of whom so many, in France at any rate, deserve the title of Epicurean, we shall find in the eighteenth much less tendency in this direction. Voltaire, though he had no dislike for the pleasant side of life, seems too petulant, too narrow, too dry for the true Epicurean spirit. Rousseau and those who followed in his wake were enthusiasts, and there is no such deadly enemy of enthusiasm as the Epicurean. You may be a fanatic for good or evil, you may preach salvation or destruction, you may rave over optimism or pessimism, and the Epicurean will smile at you, not with the bitter mockery of Voltaire, but with a patronizing expression, as who should say: "My dear Sir, how soon

all this will boil over into the cool dust of the grave."

At the threshold of the nineteenth century we meet with Goethe, and it would be curious to examine why we can set him down so definitely as un-Epicurean. He is not a Christian, surely, he whom Heine called the great pagan of the century. Yet as surely we cannot call him pagan as we call Ariosto pagan or Boccaccio. Is there, perhaps, after all in Goethe a little touch of the pedant? Or had he, too, his enthusiasm, that of the artist, burning in him as a clear and constant flame, rather than as the devouring fire which ate away the hearts of Flaubert and Leopardi?

But, so far as literature is concerned, we shall find our most interesting examples of the modern Epicurean in contemporary France. Perhaps it

would not be wholly fair to apply the name to Sainte-Beuve. If not, it would be because he laboured with an earnestness almost amounting to enthusiasm at the art which he had chosen. Yet his general way of looking at life comes perilously near that of some authors we have been considering, especially when we take into account not only his formal criticism, but his detached thoughts and the record of him that has come to us through his friends. He himself tells us that he arrived at wisdom, not by the road of Spinoza and Hegel, but by that of Solomon and Epicurus, something, I suppose, like the broad-gated way that leadeth to other things besides wisdom. Among the critics who have succeeded Sainte-Beuve we might look even more successfully for men who illustrate precisely what I

mean by the modern Epicurean. But the best example of all is the great writer whom France has recently lost, Ernest Renan. If we compare Renan with Montaigne, we shall get all the difference between the nineteenth and the sixteenth century, difference in manners, difference in traditional morals, difference in intellectual pursuits. It is quite impossible to imagine Montaigne finding his pleasure in the acquisition of a profound knowledge of Hebrew, or the study of the Semitic peoples. It is impossible to imagine Montaigne in a dusty class-room, lecturing spectacled to a small assembly of pedantic students, to imagine Montaigne a professor. But down underneath the superficial difference we come to the Epicurean basis common to both; the complete disregard of a formalized system of philosophy, the

endless delight in the play of humanity and life, the universal toleration and indulgence for the enthusiasms and the follies of others. And it is perfectly conceivable that if Montaigne had lived three hundred years later he would have come to see how merely barbarous were all his pursuits, beside the exquisite pleasure of baffling the Philistine journalist with touches of irony finer and subtler than that of Aristophanes or Heine.

Now let us cross the Atlantic in pursuit of our Epicurean of America. If we confound Epicureanism with materialism or paganism, we shall find it scattered broadcast in this beloved country of ours. I suppose we must look upon business as one of the forms of materialism, though naturally one may engage in it without being materialized. And if I wished to draw

the most universal and most truly American type possible, I should begin with the Man of Business. We see him everywhere, do we not, and everywhere substantially the same? To be sure, in Boston, he generally speaks good English and may be a college graduate ; in the Far West he is apt to be rough in manner and of cosmopolitan extraction ; in Chicago he is overflowing with a joyous confidence in the city of his choice ; in the South he has a certain dignified slowness, a pride of caste, whatever be his occupation, and a rooted hatred of " niggers " ; and everywhere he has one great tie of common humanity, — business. See him on a street-corner waiting for a car, absorbed as Archimedes. Does he look at sun, moon, and stars? His eyes are turned within. He sees nothing but pools and combinations, stocks, bonds,

mortgages, bulls, bears, corners, shorts, margins. His face is wire-drawn, anxious, does not respond to yours unless he sees business in your eye. Fortunate, if he can go home to his slippers and paper, or his prayer-meeting, and not dream all night of what has filled his thoughts all day. So far as the forgetting of all Gods but Mammon goes, this gentleman is as Epicurean as Epicurus ; but has he the least idea of pleasure in any sense of the word? That is the bitterest irony of his lot, that he accumulates and accumulates — and what for? The little delights of life are spoiled for him by absorption in business, the great seem mere extravagance ; and truly the last condition of that man is worse than the first.

Nor can there be any question about the supply of paganism. It does not,

indeed, run riot in the streets. The flaunting worship of the older gods and the wild revelry of Dionysus have given place to labour-manifestations and the parades of the Salvation Army. This incapacity for pleasure that I have just referred to hinders many a pagan from following out the desire of his heart which frames itself instinctively in the old burden : Eat, drink, and be merry, for to-morrow we die. Yet the spirit of the decaying pagan world is everywhere. We cling with voluptuous terror to the delights of this life, not knowing what may come after in the dark gulf which science points out before us. And this paganism is found, perhaps, less in the middle class, where inherited conventions have a stronger hold ; less in New England, where life is built on a more artificial model. It is the vast lower stratum, which in this country is

always pressing upward, the half-educated multitude suddenly let loose from the bonds and trammels of an older civilization, conscious of new life, of new strength, and at the same time touched by no religion, by no care or thought for morals or for love—it is this vast, disorderly mob which is essentially pagan, and which never having tasted the pleasures of this world, knows not their vanity, and labours passionately to possess itself of them. This is not the paganism of the rich and idle, but the terrible, hungry paganism of the poor, raging like fierce beasts of prey. Communism is paganism, anarchism is paganism, latent paganism, threatening to dissolve society in a mist of blood and tears.

But we do not forget that our Epicurean is neither materialist nor pagan. He loves money as the means of pro-

curing almost everything in this world. He loves pleasure in every form and pursues it with the keenest zest, but a large part of his pleasure consists in contemplation, and his training has generally been such that everything brutal is revolting to him. It is just here that we come across the peculiarity of the American type. For what distinguishes American Epicureanism, as well as many other American varieties, is the combination of vast scepticism with a strong habit of inherited morality, not to say religion. Are we not, indeed, as a nation a rather curious spectacle of strong moral principles which go back for their origin two or three hundred years, crusted about a body of theoretical or practical agnosticism with which they have nothing to do? Are not our churches apologetic, our creeds hidden with a cloud of ex-

planation? Are not our priests largely occupied with the attempt to show that our fathers did not believe what every one knows they did believe, though we do not? At any rate, the American Epicurean believes very little indeed, though he has no desire to parade his unbelief, partly because it would result in his own discomfort, and partly because he may come to believe a good many things some day. At the same time he has a habit of morals which restrains him usually from any gross fault,—indiscretion, he would call it. He looks upon a thief very much as he looks upon a dog who steals a bone from another dog, yet he feels the most uncomfortable qualms of conscience if he forgets to return a borrowed umbrella. His theories of pleasure and of virtue are those of a joyous and Falstaffian debauchee; but his air and

manner are sometimes hard to distinguish from those of a professor or even of a saint. He looks with a mild and contemptuous indifference on all forms of government and political questions ; yet he is oftentimes a useful and occasionally an active citizen, in the spirit of a French writer's excellent paradox, *Il n'y a que le sceptique pour être honnête homme et bon citoyen*. In short, it is because he is made up of so many contrasts that he is so interesting.

But, you ask, where does the Epicureanism come in? It is easy to understand the scepticism of the man you are describing, but where are his pleasures? Has he really more of them than the man of business? Is not he, too, anxious, care-worn, incapacitated for entering into the sweet of life? Doubtless, to a certain extent, he is. His enjoyment is very largely a matter of theory

instead of practice. Nor is it wholly on moral grounds that he flees far away from the disorders and tempestuous passions of a worldly life. He remembers, alas, he is too often reminded of that sentence of Anatole France, which may serve as a motto for so many Epicureans of to-day: "*Je n'ai qu'un seul plaisir et je conviens qu'il n'est pas vif, c'est la meditation: avec un mauvais estomac il n'en faut pas chercher d'autres.*" Yes, the American Epicurean must, and does for the most part, content himself with the pleasures of meditation: and perhaps they are, after all, not so much inferior to others; they are certainly more enduring. There is the delight of beauty, even if one cannot create it for oneself, the plastic arts, music, poetry. There is the witchery of nature, always at hand, always varied. Above all, there is the

vast and shifting scene of human life. As it was expressed for us three hundred years ago : “ A mere spectator of other men’s fortunes and adventures, and how they act their parts, which, methinks, are diversely presented unto me as from a common theatre or scene. I hear new news every day, and those ordinary rumors of war, plagues, fires, inundations, thefts, murders, massacres, meteors, comets, spectrums, prodigies, apparitions, of towns taken, cities besieged in France, Germany, Turkey, Persia, Poland, etc., daily musters and preparations and such like, which these tempestuous times afford ; battles fought, so many men slain, monomachies, shipwrecks, piracies, and sea-fights, peace, leagues, stratagems, and fresh alarms. . . . New books every day, pamphlets, currantoes, stories, whole catalogues of volumes of all sorts, new paradoxes,

opinions, schisms, heresies, controversies in philosophy, religion, etc. Now come tidings of weddings, maskings, mummeries, entertainments, jubilees, embassies, tilts and tournaments, trophies, triumphs, revels, sports, plays ; then again, as in a new shifted scene, treasons, cheating tricks, robberies, enormous villainies in all kinds, funerals, burials, deaths of princes, new discoveries, expeditions ; now comical, now tragical matters. To-day we hear of new lords and officers created, tomorrow of some great men deposed, and then again of fresh honours conferred ; one is let loose, another imprisoned ; one purchaseth, another breaketh ; he thrives, his neighbour turns bankrupt ; now plenty, then again dearth and famine ; one runs, another rides, wrangles, laughs, weeps, etc. Thus I daily hear and such like,

both private and public news. Amidst the gallantry and misery of the world : jollity, pride, perplexities and cares, simplicity and villainy ; subtlety, knavery, candour, and integrity, mutually mixed and offering themselves, I rub on, *privus privatus.*” These are the words of an intellectual Epicurean of a former age. But I am going to repeat to you what was said to me in confidence the other day by a friend, who is an American Epicurean, and who, being somewhat older than I, conceives that he is privileged to lay down the law for my benefit.

“ My dear Sir,” he said, “ I have no desire to preach to you, for I am too inconsistent and wandering to have a pretentious philosophy ; but if you like to profit by my experience, you may. When I was your age, indeed, from the time I began to think much about any-

thing, I had vast literary enthusiasms, immense ambition; I adored beauty with the idolatry of Keats, I consecrated myself to the service of letters with the passion of Flaubert, I was going to write immortal works, poems, novels, criticism; I lived, in short, in a sort of delirium. As a result of this, all the ordinary pleasures of life became a burden. The society of my friends, the little distractions, the delightful nothings, which pass away idle hours, were only stumbling-blocks in the path of my aspiration. I had so much to read, so much to write, more than I could ever possibly accomplish; and all that tended to interfere with my work, was an annoyance, however charming in itself. Well, one day it came over me, 'How foolish all this is; will any reputation or success ever satisfy me? shall I not be always as

far from the goal as now ; indeed, am I not getting farther and farther from it, since every book I read and every page I write, opens the possibilities of reading and study infinitely wider than they were before? And this might not be so bad if I had hopes of an endless future, of possibilities of accomplishing and perfecting in another world what I must leave imperfect here. But with no such hope I am wasting the sweet of life for nothing, toiling and labouring to a barren and unprofitable end.' You will easily understand that I did not begin to cry out in this fashion until I found that the grapes hung too high for me, that I had not the health, or the courage, or the genius to succeed.

“Then I made up my mind that I had had enough of it, that I would tamper no further with vain hopes and futile ambitions, that I would no longer live

in a prison-house of dull abstraction, with nerves exasperated and brain outworn, simply to pursue an unattainable and vanishing ideal. I would live on the good, solid, dusty earth and ask no more. And here comes in the value of my experience for you, young friend. For no sooner had I taken this resolution, no sooner had I abandoned hungry labour, fierce aspiration, the vain struggle of impossible desires, when the aspect of the world was changed, as if by enchantment. I who had railed before at the monotony and bitterness of life, who had proclaimed my pessimism from the housetops, declaring that the world was stale and old, that no pretence of diversion could relieve the tedium of the gray hours rolling heavily one after another, I, the prophet of *ennui*, suddenly discovered that the common existence of

every day was but a succession of little delights, coming often so thickly that one is embarrassed to choose among them. Those of my pursuits and occupations which had before seemed to me a trivial and frivolous waste of time, now became an endless source of amusement and pleasure. Formerly, when a friend dropped in for an hour's chat, I was haunted by the page I might have written, I fretted and fumed over his leisurely departure. Now I take a cigar with him and a glass of wine, put my feet on the table, and babble about the latest novel and the taxes. I love books — as did Montaigne — on the shelves, and with the delightful feeling that I can read them when I wish to, rarely reading them. I use,† to think cards a squandering of human life, and billiards a device of the devil — whom,

you remember, I did not believe in. Now I take a cue or a hand at whist whenever I can find any one so idle as myself. You, my friend, who know nothing about these things and walk through life simply blind, as I did, cannot realize what a wealth of joy—in small change—you are throwing away. You cannot stop to look at a sunset, because you must write a sonnet on it. I thrust my hands in my pockets and gaze till the last glow has fled away—and then turn to amuse myself with something else. Like the old mystic,

“ ‘On some gilded cloud or flower
My lingering soul would dwell an hour.’

The laughter of children, what old Burton found so amusing, the quarrelling of bargemen, the nodding of a blossom in the wind, the change of shadow and

sunlight, the singing of a bird, the falling of a star, the love of young men and the folly of old ones, the smiles and tears of women, fashions, freaks, politics, philanthropy, temperance and intemperance, the vanity of men's serious pursuits, and the woful seriousness of their vain ones, — in all these things there is infinite matter for more than a May morning, if only one is not tortured and broken by preoccupations and cares that seal one's eyes with lead.

“And the beauty of these lighter, slighter pleasures is, that they are not subject to disappointment. In this endless round of small delights one does not look forward to long, one does not look backward to compare. If one amusement fails, there are a thousand others at hand ready to make one forget it. In short, it is the old

parable of the children and the Kingdom of Heaven. Take life as a child takes its playthings. Enjoy each one, and be ready to pass at a moment's notice to another. And, above all things, do not trouble about death. That is another advantage of this disenchantment which brings a double enchantment with it. If you are struggling for a high ideal, if you have a great work to accomplish, you are in constant fear of death, of losing your object, of being cut off just as you are about to attain. There is but one thing that can hamper or annoy you more in your efforts than life, and that is death. Now, this sweet Epicureanism that I am preaching to you, makes death all but an indifferent matter. This endless round of little interests and pleasures serves very well to pass away the time, but

you are willing enough to leave it. That strange curiosity with which death tickles us has full play, so that even in the very midst of pleasures we are as ready as mortality can be, to lift the black curtain and step out into dim night. Yes, my friend, take my word for it, the Epicureanism I recommend to you is the Epicureanism of Epicurus and the true philosophy of life."

I listened respectfully, and said to myself: "It may be, I suppose, an excellent philosophy for him who has no better."

THE AMERICAN PHILAN- THROPIST.

“EVERY century,” says Sainte-Beuve, “has its hobby: that of the nineteenth century is charity.” This does not mean that the various moods and theories included under that name were unknown before, but that the nineteenth century has made the most of them, has become absorbed in them to a degree earlier periods would have found it difficult to understand. Now anything peculiar to the nineteenth century is likely to find its fullest development in the United States. We are people of our time, stamped with its very form and pressure; and we are not clogged and

retarded, as Europe is, by old habits and inherited traditions.

It is a laudable custom to attribute everything good that has appeared in the world in the last eighteen hundred years to the influence of Christianity — philanthropy included. Even those who are not quite satisfied with this method are at least obliged to admit that every great spiritual movement since the advent of Christianity is intimately connected with it. The most attractive way of representing the matter philosophically is to regard Christianity as a vital element in the great progress of the human race, at once conditioning and conditioned by the other elements that play about it. Some people, however, deny the fact of progress altogether. "We gain," they say, "in one direction; we lose in another; and humanity in its essential

traits remains the same." This view requires some distinctions. It is, indeed, true that the basis of our nature, the assertion of self, which has been summed up in the reproductive instinct and the instinct of self-preservation, continues unchanged. As long as we are animals, it is difficult to conceive of anything else. But who can compare the world of to-day with the world of the Jews or the world of the Greeks and Romans and not say that the intellectual progress has been enormous? Any theory of evolution necessarily implies such a progress; but mere empirical observation surely proves it without regard to theory. Now the moral nature of man involves a combination of intellect with the animal instincts; therefore, as regards morals, if there has not been progress, there must at least have been change.

Of course, it would be absurd to deny that the elements of charity or philanthropy existed in the world before the nineteenth century, or, indeed, as far back as we know anything of history. How can we imagine a thinking human being destitute of the impulse to give bread to the hungry and to relieve the wretched from oppression? The oldest literature abounds in instances of such sympathy and tenderness. There is not, however, much evidence that the doctrine of human brotherhood, of the solidarity of mankind as such, was popular, or even known, among the Greeks, for instance. With the Romans it is something the same; but the vast extent of the Roman Empire, the multitude of different races living in harmony together under that one sway, the toleration induced by this, did much to overcome

the narrowness of ancient ideas of nationality, to emphasize the value of the individual human soul. Perhaps no classical quotation is more famous than the *Homo sum: humani nil a me alienum puto*. The philosophers of the Stoic School — Seneca, Epictetus, Marcus Aurelius — exerted a great influence in the same direction; but philosophers unfortunately do not think much of those who are not philosophers — good creatures, but so ignorant! Besides, how was it possible for the brotherhood of man to make headway in a nation whose whole political system was based on slavery?

Here comes in the influence of Christianity. The most superficial examination of even traditional Christianity must show that its fundamental principle is the value of the human soul as such. “To the poor the gos-

pel is preached." "The last shall be first, and the first last." "For I am come not to call the righteous but sinners to repentance." Here is no distinction of class, no promise held out to the great and noble only, no salvation offered as a premium to wealth or to superior intelligence. "Blessed are they that mourn, for they shall be comforted." At last there shone upon the earth a light that was to lighten spirits in darkness, and to heal those who seemed beyond all cure.

Well, Christianity, in spite of its philanthropy and its democracy, got along very comfortably with the despotism of Rome and the despotism of Constantinople, with the tyranny of the Dark Ages, and the bigotry of mediæval Catholicism. It may be said that the teachings of Christ were abused

rather than used by all these powers of evil ; yet it seems strange enough that such a tremendous influence should not have produced a result earlier, if its tendency was really in the direction suggested above. The explanation is simple enough. Christianity did, indeed, teach the absolute equality of all men, the perfect equivalence of one soul with another, whether rich or poor, wise or unwise, but—and here is the point—this equality was not in relation to this world ; it was in relation to another. It was the application of this principle that at once enabled the lower classes to bear at all the terrible anarchy of the Dark Ages and disposed them to bear it patiently. For the peasant, who at one blow saw house and family torn away from him, there was at least the consolation of feeling that all these

woes would be soon drowned in the light of a joy which was open to high and low alike, and which would come not to the oppressor, but to the oppressed. On this account Christianity may be regarded rather as—at least negatively—the enemy of political freedom and republicanism, of the attempt to improve the condition of humanity here on earth, than as the friend of all these things. For these things require a preoccupation with the affairs of this world which is apt to interfere very considerably with devotion to another. Whether justifiably or not, the formula, “Render unto Cæsar the things which are Cæsar’s,” has been made and can be made to support almost any kind of arbitrary government.

Therefore, it is in a sense correct to attribute the philanthropy of the

nineteenth century to Christianity, in another sense it is incorrect. The true account of the genesis of that mighty force is, I think, something like this. After the feudal oppression of the Dark Ages we come to the Renaissance, the awakening of the human spirit from its lethargy of a thousand years. The merely animal life in this world,—brutal in its enjoyment, stupid in its misery,—the earth-forgetting, transfiguring life in the next world, began to give way to a great reaction, which substituted for the play of muscular force the application of intellect to all the varied interests of human existence as we find it on the green earth here about us. The old Greek and Roman civilization reappeared, modified, deepened, and enlarged by the influence of Christianity. Freed from the bonds

of ecclesiastical slavery and political anarchy, men gave themselves up in ecstasy to taking possession of all the new sources of joy offered them by the present and the past. A great drama in England, Spain, and France, a great school of painting in Italy, gave vent to the re-awakened creative imagination which had fed upon Greek thought, upon Christian feeling, above all, upon Nature and human life, as they were presented to human life then and there. This gorgeous carnival lasted longer in some countries than in others, but it lasted everywhere in its general effects through the sixteenth and seventeenth centuries down to the eighteenth. Then there was a cooling off. The glow of imagination faded a little, and reflection, coming to look into things, found that the world was not yet altogether perfect ;

indeed, in many respects quite far from it. It was evident that art and the charm of society were very well for those who could get them; but there seemed to be such a large portion of humanity that never did get them, was, in fact, quite as badly off as when these things were not heard of in the world at all.

Here we come to the dawn of modern philanthropy. The theoretical doctrines on the subject came from Rousseau and the philosophers of the eighteenth century. Those philosophers were no friends to the Christian Religion, and to give them all the credit in the matter might seem like disregarding the part of Christianity altogether. The fact is, however, simply this: Rousseau and his friends took from the religion of Jesus the essential principle of the equality of all men, but as their eyes were fixed on

this world rather than on the other, they applied it to the affairs of this world, as Christianity never had cared to do.

With the eighteenth century, then, the history of philanthropy begins, that is, of the doctrine of the universal brotherhood of man, of the elevation of the race as a whole, of the sacred right of all men to certain elementary privileges, of the duty and pleasure of associating others with one's own joys, of associating oneself with others' suffering and misery. It is impossible to separate this moral doctrine from the political theories that have resulted in universal suffrage; and the best guarantee of the permanence of the political theories is the impossibility of any return from the moral standpoint. How can the civilized world ever go back to the idea

that one class of men exists only for the benefit of another? The theory of political equality may prove very difficult of application, so difficult that a state of things quite opposed to this theory may be brought about here and there again and again. But nothing short of the complete extinction of our present civilization can make mankind forget the lesson it has been so long in learning.

Other elements besides reasoning do, however, enter into the doctrine of human fellowship. The restless imagination of the Renaissance set itself at first to create innumerable beings in the world of art, beings that might afford an outlet for its new tide of passionate emotion. But after this resource was partially exhausted, or, more properly, after restlessness and curiosity had spread from

the artists among those who had no particular creative gift, a flood of human sympathy began to pour over the whole of animate and inanimate nature. The mind, grown too vast, too noble for any satisfaction that the body, the life of the immediate individual, could afford it, longed to extend its sphere of sensation, to feel not only in its own limited range but in the personality of others, nay, in the vast and varying forms and moods of nature. The literature of the end of the eighteenth century and the beginning of our own, the so-called romantic movement, is a proof of this. When had there ever been before such an enthusiasm for reviving the history and the life of the past, when had there been such a passion for the natural world, such a wild, strange longing for identification

with the life of life, for some escape from the narrow, confining prison of ourselves? The Greeks had been content with the calm and moderate enjoyments offered by social and national existence. The men of the Renaissance had thrown themselves feverishly but yet joyously into the whirl of the senses. But the Sénancours, the Chateaubriands, the Byrons, the Shelleys, looked and longed for some satisfaction not to be found here, some larger, deeper grasp on being than is possible with the limitations of our sensual bodies. In the words of the profoundest of them: "The jonquil or the jessamine would be enough to tell us that such as we are we might sojourn in a better world."

The restlessness, the fever, of that generation has passed away. A philosophical acceptance of limitations has

spread more and more widely. The intellect, attempting no more to take the senses with it in its wanderings, has turned into the ways of science, has schooled itself to understand nature rather than feel it, to accept, since perforce it must, analysis instead of passion, curiosity instead of sympathy. Only the keen apprehension and comprehension of other people's lives can never be lost. We may not succeed very well in entering into their pleasures; but we are condemned, so long as the world shall endure, to feel their pain.

It is the combination of abstract doctrines as to the rights of man with this infinite sympathy, this acute sensibility, that makes philanthropy the swift and mighty force it grows to be. All of us, so many of us, at any rate, say with Shelley :

(“Me who am as a nerve o’er which do creep
The else unfelt oppressions of this earth.”)

We realize in our very bodies the suffering of the poor and wretched, to an extent beyond the conception of a Greek, or Roman, or Elizabethan. We are ready sometimes to cry in despair with Sénancour: “How can a life be happy passed in the midst of those who suffer?” Even the calmest and sanest have at times an uneasiness, almost a sense of guilt, when they find themselves comfortable and well-off with poverty and misery about them.

Nowhere, probably, is this tendency so strong, nearly so strong, as it is in America. In Europe, inherited distinctions of class make certain differences natural to the rich and tolerable to the poor. Here we all feel that the very theory of our government demands equality, not only political but social;

and the struggle to maintain it is passionate. Another thing that makes philanthropy a prominent feature of our civilization, is the new and immense activity of women. The great amount of practical energy brought out in them by education, combined with their natural sensibility and enthusiasm, makes them leaders and guides in all humanitarian movements. When they do not take the control of things into their own hands, they stand in the background and urge on the men. How many objects which men have deemed hopeless have been attained by the indomitable idealism, the tireless persistence, of women !

Certainly, the philosopher of three hundred years ago would note among us first of all the extraordinary number of charitable societies, of private benevolent institutions of all kinds. There

is no end to them : missionary societies abroad among all nations and among all classes at home, temperance societies, associated charities, societies for the aid of men, of women, of children, soldiers, sailors, animals, societies to protect the uncontaminated and convert the corrupt, societies to do anything and everything that the imagination of man — or woman — can invent, and his ingenuity execute. The extension of this universal sympathy beyond man, even to animals, is well known, as are also the immense results achieved in that direction. For the logical extreme of this we must go to the episode in the *Light of Asia*, where Buddha is represented as offering his life-blood to quench the thirst of an exhausted tiger. The Occidental not only shrinks from this ; his serene good-sense teaches him to laugh at it. Nev-

ertheless, it shows that philanthropy, or rather self-renunciation, has its limitations, and perhaps is not such a universal panacea as, like other hobbies, it is sometimes assumed to be.

In short, no amount of sentiment will cover up the fact that the principle of absolute self-sacrifice is based on a contradiction. The first instinct of the human animal, like every other, is the satisfaction of immediate desire,—appetite, if you will. The development of the intellectual faculties, however, soon shows the insufficiency of any satisfaction appealing only to the senses. The next step is to construct an ideal of happiness beyond and outside of this present world, which shall be attained by the subdual and humiliation of desire in this, by self-sacrifice and even martyrdom. The enthusiasm of primitive Christianity, of mediæval

Christianity, was based on such a system. But a further process of development shows the insufficiency of even this postponement of happiness, and higher and more sensitive natures begin to repudiate distinctly the idea of buying a selfish bliss in the future by self-sacrifice in the present. Good must be done, not for gain, but for the sake of doing it. We are here, as I heard said the other day, to live for others, to be useful to the world as a whole; when we cease to be so, we have no right to live at all. After traditional Christianity has been abandoned, even after all definite belief in dogmatic religion has faded away, we find people making out of this devotion to others a new religion, with the high-sounding name of Altruism. It is said that the child of a philosopher, hearing one day much lecturing on this subject

of living for others, commented as follows: "But, Papa, if everybody is to live for others, who are the others?" Out of the mouths of babes and suckings —

It must be kept in mind that the principles of this religion are not those of Christianity, though they may accord with them in some points: the Christian renounces self that he may regain it more fully and freely, but there is an immense difference between this self-renunciation and self-annihilation. You become supremely indifferent to everything on earth, you become very misty about heaven; but other people are less sceptical — why not give them all the happiness one can? Nineteenth century philanthropy is closely connected with a colossal indifference, also peculiar to the nineteenth century, a world-weariness, not

passionate, not despairing, not blasé, but simply indifferent, which sums up its philosophy in this direful phrase: "The ideal of life is to be able to have whatever you want and to want nothing whatever." O, poor humanity, which, seeing strewn before it the gray ashes of burnt-out pleasures, deludes itself a little longer by bustling about to fan, if possible, the lingering coals into a glow!

Of course, neither this indifferentism nor genuine ideal enthusiasm accounts for all philanthropy. Self is not so entirely dead among those who busy themselves with the welfare of others. We must allow something to the imperative demand for activity that is born in us, the constant and intense need of applying our mental energy to one form or another of the stolid resistance offered by nature animate or inanimate. In the

Middle Ages this restless force expended itself in destruction. Those who to-day are philanthropists and save lives in the fourteenth century destroyed them. Would not Hotspur have made an admirable philanthropist,—Hotspur, “that kills me some six or seven dozen of Scots at a breakfast, washes his hands, and says to his wife: ‘Fie upon this quiet life! I want work’”? How often one is disgusted with the egotism, the arrogance, the pettiness of philanthropists. With what righteous scorn they affect to regard any one who goes his own way quietly, peacefully, not injuring the rest of mankind and not over-anxious to destroy himself in their service! And what supreme confidence has the philanthropist in his methods, what sovereign indifference for the methods of nature! After one has suffered and suffered long under

this infliction, can there be balm more delicious than Emerson's quiet sentence: "Nature will not have us fret and fume. She does not like our benevolence or our learning much better than she likes our frauds and wars. When we come out of the caucus, or bank, or the Abolition-convention, or the Temperance-meeting, or the Transcendental club into the fields and woods, she says to us, 'So hot? my little Sir?'"

The truth is, now that war is done away with, at least for the time, our civilization offers no sufficient equivalent. Trade — that more systematic but quite as pitiless struggle — is too slow, too barren of occasions for distinction, too openly and evidently egotistical. War, though founded on hatred, does breed a spirit of union for one cause, does afford numberless oppor-

tunities for heroism, for all the higher and purer virtues of self-sacrifice. Trade in itself fosters only one thing, pure, cold, calculating selfishness, and encourages a system of morality which gains nothing whatever by comparison with that of war. Indeed, it is curious to notice how there has grown up side by side with philanthropy and from the same source a doctrine and method of life entirely opposed to it, the most extreme and intense individualism. Men are all equal: well, then let each one take care of himself. Equal rights imply equal ability to defend those rights. Society is a mutual arrangement by which every man is enabled, the most fully to struggle with every other man for material advantages, not a vast organization in which each person plays his subordinate part for the benefit and happiness of the whole.

There cannot be too much insistence on the immense distinction between republicanism — as conceived by Plato, for instance — and democracy, between the State as an ideal, organic principle, and individualism, or in its logical extreme, anarchy.

Now in many cases philanthropy, enthusiasm for benevolent objects, is but a cover for this tendency to individualism, to colossal selfishness. Men whose whole lives are spent in a passionate struggle, their hand against every man's, and every man's against them, compound with conscience by giving a thousand, or a great many thousand dollars, or even what is more, their time, to this or that missionary society or charitable institution. It is so much easier even to sell all one has and give to the poor than to overcome this lurking, poisoning, tempting, mas-

tering devil, self. Money is so much easier to give than love. But here we have our Emerson again in a passage that has been a puzzle and bewilderment to many a gentle and generous soul :

“ I tell thee, thou foolish philanthropist, that I grudge the dollar, the dime, the cent I give to such men as do not belong to me and to whom I do not belong. There is a class of persons to whom by all spiritual affinity I am bought and sold ; for them I will go to prison if need be ; but your miscellaneous popular charities ; the education at college of fools ; the building of meeting-houses to the vain end to which many now stand ; alms to sots, and the thousand-fold Relief Societies ; — though I confess with shame I sometimes succumb and give the dollar, it is a wicked dollar, which by and

by I shall have the manhood to withhold."

In good truth there are times when one grows infinitely weary of this cant, which persists in taking the manner for the matter, the letter for the spirit, the hand for the heart.

Is there, then, nothing more to be said? After such a cold analysis, is there no palinode to be sung? It seems almost a crime to sit idly in one's study and dissect, perhaps falsely, at any rate uselessly, the most real, the most lasting, the most ennobling of all the interests that make life beautiful or even tolerable. It is not the great movements that count, the noise, the ostentatious self-sacrifices, the flaunting self-conscious activity; it is the quiet lives of daily renunciation and denial, the lives that are passed in shadow, devoted to soothing pain, to ending

strife, to spreading love by sweet example, without reward, often unconsciously. Who can overlook it, or resist it, or put it away from him? we are not men, but man. What you have suffered I may suffer, do suffer; what you enjoy, enjoy. Do we not all, all come back to those words of Shelley,

“ Me who am as a nerve o’er which do creep
The else unfelt oppressions of this earth ” ?

He whose nerves do not thrill and throb and burn at the thought of tyranny or injustice — injustice of humanity or the still fiercer injustice of circumstances — is not a man, but a machine, does not exist. When we are away from home, faces indifferent there, or even disagreeable, become sweet and full of kinship. So must it be for man with man in the wide, uncertain desert of this world. As ship-

wrecked sailors, in their hour of calm and prosperity separated by jarring interests, by petty quarrels, are yet knit together in one great terror before the face of death ; so we, as we look at our individual, earthly existences, feel no connection, no sympathy ; but when we turn and meet the invisible, the unknown in which these frail habitations, our bodies, are swayed like a bubble in the wind, we cling together mutely, passionately, sustained by that love alone in the dim gulf of an enormous night.

THE AMERICAN MAN OF LETTERS.

IT is difficult to define the man of letters. He is one who lives for literature, and generally by literature, who makes it a serious pursuit and no pastime; not a specialist, though he sometimes deals with specialties; nor a scholar, though he is sometimes deeply read in many things. If he writes on philosophy or history, he must have a sense of style, of dramatic construction and effect. Plato was a man of letters, but can one say the same of Aristotle? Tacitus was, and Gibbon; but one hesitates to apply the name to Mommsen or to the late E. A. Freeman.

There are some poets who hardly seem to be men of letters, — singers of spontaneous and flowing genius, who write as they breathe, and have apparently no consciousness of effort: Shakspeare, Chaucer, Byron, Scott even, in spite of his enormous production and the labour involved in it. Virgil, on the other hand, Dante, Milton, above all, Goethe, are men of letters first, poets afterward.

I have named a classical and a mediæval writer. Such men as Lucian or Erasmus have certainly much of the modern man of letters about them. Yet it is with the seventeenth century only that the type fully develops its qualities. Dryden is an admirable example: ready to turn his hand to anything, swift in production, easy in manner, free from pedantry, yet accurate, and careful of pure diction;

proud of his profession, not treating it as a plaything, like Byron and Scott, yet a man of the world, with his eyes open to what went on about him. And in France we have Voltaire, to whom pedantry was of all things most abhorrent, yet who never let his pen dangle nor forgot his art. The ideal man of letters stands half-way between the poet and the literary hack: he envies the poet's divine fire, but dreads his frenzy; he scorns vulgarity and the hasty patching of the penny-a-liner.

The journalist is not necessarily a man of letters, but the growth of journalism has made a great difference in the literary career. Before the days of periodical literature men wrote for a small, cultivated class, whose criticism was always more or less intelligent; they had not the

pressure of a yawning column waiting to be filled. This hurry of publication suits some quick and active minds, which work readily, perhaps work best, under the spur; but it is not favourable to long, silent, patient labour on a masterpiece. It is so easy now for the best writers to slip into criticism, into facile, graceful comment on the works of others! The magazines are open, and pay well; easy writing makes easy reading; the public prefer what they can catch at an idle moment, in a car, between two naps. Perhaps great geniuses do not fall into this error, but it is strange if they do not. At any rate, we are flooded with books well worth reading, full of talent, which may not be slighted, yet ephemeral, not only from haste of composition, but from their exclusive appeal

to the taste of the day. Take, in French literature, for instance, Sainte-Beuve, a man of the most original genius, penetrating insight, grace and poetry of style. He has been dead twenty odd years, and how old-fashioned he seems beside the French criticism of to-day! I do not mean that MM. Brunetière, Faguet, Lemâtre, France, are his superiors in knowledge or skill, but they are near to us, and he is remote, — as they will be twenty-five years hence.

The modern man of letters — especially if we confine ourselves to the poet, novelist, dramatist, or critic — is sorely tried by the need of deciding between two alternatives. On the one hand he has before him the literature of the past, a huge, silent treasure-house, which he must explore more or less, which he can never ran-

sack thoroughly, which, if he has the conscience of his art, perpetually haunts him. On the other hand he has the spectacle of life, — life infinitely varied, as in the modern world it is, in any world, — the bewildering beauty of colour and movement, the endless play of human passions on each other, the million new shapes in which old traits appear, morals and immorals, the one as interesting as the other, and none of these things to be neglected. He needs the books to throw light on the world, he must have the world to vivify the books. How can he have both? The modern literature of Germany amply shows the lack of the one. And those very French critics I have been speaking of show the want of the other; for, varied and charming as they are, one does not find them very deep in in-

tellectual matters. Even when they are familiar with their own literature, it is really astonishing to an American to see how ignorant they are of the literatures of other countries. Yet in the nineteenth century, to know one literature one must know all.

The tendencies of modern literary life in France are illustrated in an interesting way in the *Journal* of the brothers De Goncourt, whose intimate and long-continued collaboration is one of the most curious cases of a curious phenomenon. They were men who chose their course early. The past had little interest for them and was soon cast aside. Except in one or two periods history had no lessons for them. They cared only to keep their eyes and ears open to what went on about

them, to rivet all their senses on the subtle yet significant phases of contemporary life. By this method they succeeded in obtaining very curious, in some respects very admirable, results; but their narrowness and lack of sympathy annoys one constantly.

Another difficulty for the man of letters: there has never before been any such competition as he is obliged to contend with to-day. It is easy to say that good work will always come to the front, that genius will make its way. But there are different kinds of good work. The public has never been so composite as it is now. Before the universal triumph of democracy literature was controlled by educated people. They may not have done all the reading, but they did all the deciding. If they pro-

nounced anything good, the herd took that or nothing at all. Now every one is educated so that there are no longer educated people. What is of more importance, every one is busy. Literary work, to reach permanence, must fight its way through the mob of weary men and women who read to be amused in the easiest and most superficial manner. It must not only have abiding qualities of originality and power; it must have superficial attractions, which are not always combined with such qualities.

In other words, the candidate for literary honours has to compete not only with genius but with mediocrity. This must have been always the case to a certain extent, but it is of the greatest consequence to-day. The career of a novelist like M. Georges Ohnet in France illustrates what I

mean. He is apparently an author of great cleverness, with an easy grace of manner, and a faculty of writing to please the average man because he resembles him. Well, his success has been enormous. He sells not only editions, but tens of editions with perfect ease, and it is amusing to watch the wrath and scorn of the French critics to whom it falls to judge him. Possibly names of the same kind might be picked out for England and America.

One great advantage that mediocrity has in this race is fertility of production. This is not always denied to genius, as we see in the cases of Scott and George Sand, though it is to be wished that even they had yielded a little less to the pressure of popularity. But evidently fertility is not a necessary element

of great literary power, and to write hurriedly is certainly not the best way to write well. Now, writers like M. Georges Ohnet, and many others, whom I need not name, can produce their literary wares, such as they are, as readily as they breathe. The limit to their work is set only by their industry and their physical strength. Conscientious, thoughtful, painstaking writers can not for a moment compete with them.

Imagine a young man who begins with a determination to make literature a profession, the business of his life. He has high ideals, original views of things. He has prepared himself by careful study of great thinkers and great masters of style, and he is ready to study much more, to make his work solid and worthy of a place among the books he worships.

He says to himself: "I will not trifle with what is ephemeral. I will not condescend to cheap work, hack work, hasty work. I will not degrade my genius, if I have one, by that of which I should hereafter be ashamed." What is such a man to do? If he is poor and must earn his living, his position is worst of all. But even suppose him so situated that this is not absolutely necessary. He must get his name before the public and keep it there. Thoughtful, serious criticism will not do this for him. Even fiction will not do it, unless he has some special rattle for the public imbecility. Poetry, if it were composed by all the nine Muses together, would never reach the light of day. I remember seeing it stated not long ago, and I have no doubt correctly, that there is not a publisher in Amer-

ica who will take any risk with poetry by an unknown author. Perhaps this has been always more or less true. Certain kinds of literature have never had an extensive sale when first produced; but supposing the sale of them to have been in times past no larger than it is to-day, — and very likely it was not so large, — the damning fact is that they are choked at once by the enormous mass of more popular work put in competition with them. It may be that the wheat has never prospered more abundantly than now, but the crop of tares has increased a million fold.

Our young author, therefore, yields to the temptation to sow tares of his own, thinking that, just as people plant quick-springing grain to protect their lawns, and then get rid of it afterwards, so he can bring forward

his good matter under cover of his trash, and with years transform himself from a jack-of-all-trades to a passed master in the highest province of art. It may happen so sometimes. More frequently the man who thus sets out falls more and more under the rod of public tyranny. If he succeeds in a popular line, it is hard to give it up. If he fails, he is tied to the wheel indefinitely. In any case, he awakes some day to find his style disfigured and corrupted, his ideas scattered and deformed, his confidence in human nature wofully shaken, his great literary ideal faded and vanished, he knows not where.

But suppose he avoids this danger, and, instead of putting on the yoke, chooses an eremitic or Bohemian wretchedness, with only his ideal to adore. Suppose he avoids the mam-

mon of popularity and closets himself with some great work, which, once published, shall bring him fame and riches and everything that is desirable. In the first place, a great work carried on under these conditions is apt to come to nothing. Without the spur of definite hope, a man in such a case procrastinates until the ideal of success seems so far off that he prefers to nurse it for itself rather than risk the loss of it altogether. Even if he perseveres, overcomes poverty and sickness and heart-sickness by indomitable will, makes his work his pleasure and shuns everything that does not tend to forward it and perfect it, — well, are the chances great that he will ever get it before the world, or that, when he has dragged it from publisher to publisher, and at last found a reluctant

acceptance, he will ever get more for it than scanty praise and scantier pence? Of course, this "mute, inglorious Milton" sort of thing is generally rejected; people say that really inspired production is always recognized. Perhaps it is; but how do they know it?

The truth is, the uncertain fortunes of literary work are a melancholy fact. Not to mention the shifting fame of even Dante or Shakspeare, take Shelley, who paid for the publication of his own poems, take these same De Goncourts I mentioned above, who also paid for the publication of their earlier novels, and who afterwards stood among the first writers of the school. Perhaps one ought not to say that everything refused by publishers is good, but one may safely infer that much is so. Not that they can be

blamed. Plenty of people to-day speak with enthusiasm of *David Grieve*; yet there are also plenty of critics who, if one judges by their tone, would not accept it offered them by an unknown writer.

There are chances in all these things. Flaubert worked years over *Madame Bovary*, putting into it almost incredible labour and care. It had an enormous success. Nevertheless, in the De Goncourts' Journal we find him complaining bitterly that what made *Madame Bovary* succeed was its *côté vaudeville*, that is its having what the French commonly call a success of scandal. Indeed, no one could for a moment imagine that either *La Tentation de Saint Antoine*, *Salammbô*, or *L'Éducation Sentimentale* would have made any impression on the public, if *Madame Bovary* had not preceded them.

Those who do not mind the harsh and monotonous pessimism of Leopardi will find in his essay called *Il Parini ovvero Della Gloria* a vigorous and passionate statement of the difficulties with which the modern man of letters has to contend. Leopardi himself failed in the struggle with them, or at least he could not overcome them during his lifetime; and what he thought of posthumous reputation the reader will learn from the essay referred to above.

What I have said thus far is general, and does not especially bear on American conditions. One or two things make the position of the American man of letters quite different from that of his French or English brother. In the first place, — though it takes courage to say so, — our public is more ignorant. That is easily

explained. The public here includes a far greater part of the population than in European countries. Such magazines as *Harper's* and *The Century* are read by every one. They must therefore contain matter that every one can read. I have heard that the editor of a magazine more literary in character than either *Harper's* or *The Century* aims to take nothing which will not be alike intelligible to his butcher and to a college professor. The taste of one may be as good as that of the other, but it is something of a strain to have to address oneself to both. The late James Russell Lowell is credited with saying that we were "the most common-schooled and the least educated people in the world." I doubt whether that is true. But it is probable that education, taken in the

sense not of common-schooling nor of mere scholarship, but of thoughtful, trained knowledge of human life based on a familiar acquaintance with both the past and the present, never had less influence over the fortunes of literature, at any rate, and perhaps of some other things, than it has in the United States to-day. With this condition of affairs the American man of letters has to contend. Well is it for him, if he succeeds, as Lowell in a measure did, in combining a talent for catching the ear of the great, indolent, capricious public with solid learning, original thought, and literary charm. Without the first of these requisites he will give up his pursuit in disgust, or he will struggle vainly, wearily, and wreck at last, unhonoured and unknown.

Another difficulty the American

man of letters has to overcome. He has no literature behind him. It is hardly possible for one who has not given himself to a literary life to imagine what this means. The French or English historian, critic, novelist, poet, has an immense past from which he can draw matter sure to be interesting to his public, sure to command a certain amount of sympathy from its very nature. A critic like Sainte-Beuve — and, indeed, like most of those of contemporary France — may bury himself entirely in French literature, may know little or nothing of the literature of other countries, and have by that very fact a better claim on the attention of his public. The same is true of models as of matter. A Frenchman or Englishman has behind him the great masters of his own literature, the study of whom is

connected with all the circumstances of his own intellectual development. Every reminiscence of them is sure to be familiar and acceptable to his readers. Every association with them gives an added charm to any work of his own.

It will be said that we have at any rate two hundred years of history behind us. It is very true, and of late excellent use has been made of it. But if we take out two or three wars, some of those not the most exciting ever heard of, no one will, I think, maintain that our past is picturesque when compared with that of Europe in the last two centuries; nor has there been till very recently the variety of manners or the movement of life which is absolutely essential to literary work intended to interest the general public.

For models, however, we are much worse off than for historical material. Irving and Cooper, Prescott and Motley, are excellent writers, no doubt; but there are not many more like them, and no one will, I think, place them with Shakspeare or Voltaire. We usually think of the literature of England as belonging to us also; but any one who has tried it knows how hard it is to keep up this fiction, how jealous people are inclined to be of what is English, how far away from us English manners and interests are, while they are growing more distant every day.

There ought to be some advantages in not being hampered by a tradition inherited from the past. If we have no models to work from, we should in all fairness have no standards to be judged by. This is not, I think,

practically the case. A great part of our literature consists of imitations of old-world celebrities. And the new schools which struggle after originality are apt to show a painful effort in the pursuit of it. Whitman, for instance, is a man of genuine power; yet it is hard to tell whether he is more affected in his departure from recognized standards or in his unconscious reproduction of them.

It will be asked why any one goes into literature at all, when the prospect is so unattractive. But the answers — there are a number of them — are ready. In the first place, the literary life is supposed by the outsider to be an easy life. It is not an easy life, but people are tempted into it on that supposition. It is a comparatively free life. That is, you must work all the time, but you need

work only when you wish to, if the paradox be permissible. At any rate, you have no one in authority over you.

It is a life that requires no training, or at least on this point also many are misled by the popular idea of it. It is certainly a lottery in which the prizes are very great, and in which they may and do fall where they are least expected, if not least deserved. In the other arts one never succeeds without prolonged and patient effort. In literature cases have been known where great success attended the first attempt. Most of us have a good opinion of our own powers before we have tried them. Why should not we startle the world as well as others?

Great is the love of reputation. It is agreeable to be bowed down to, and in this country especially, a small

amount of literary distinction goes a great way. The popular correspondent of a newspaper, who very possibly cannot spell, gets much more incense than the author of a treatise on philosophy. And where reputation, numerical glory, is the object, — with whom is it not an object of greater or less account? — what more dazzling ideal could be proposed than literary success in the United States. A public quantitatively so great was never addressed by an author before. A novelist, a novelist who attains notoriety, can, I suppose, count on millions of readers. Compared with the successes of two hundred years ago, it really seems like writing for posterity in your own day.

Naturally, then, a good many men, and a good many women, go into lit-

erature, and as they go into it with their eyes open, perhaps they deserve no pity when they fail. Still, some of them cherish the amiable delusion that they are giving their lives to benefit the human race, and one cannot refuse them a certain amount of sympathy. Indeed, in so far as they keep this ideal before them, they are surely worthy of all respect and admiration. The man who refuses to sacrifice his literary conscience, who refuses to bow down before the altar of cheap sensationalism, trivial gossip, machine politics, who does these things not only from perhaps fantastic notions about the service of art for art, but from a sense of personal dignity and self-respect, that man, whether successful or unsuccessful, deserves all honour, more than in many instances he gets. He is the

ideal American man of letters, and I might have dwelt more fully on him. His office is, or should be, a most important one, and he must strive with all the power in him to make it so.

One writer we have had who took this position in an almost ideal way; I mean Emerson. Emerson was not, indeed, a man of letters in the narrowest sense. He was more than that. He was a prophet, a sage, an inspirer of other men, who used literature, sometimes a little impatiently, as an imperfect instrument for imparting the truths he felt himself destined to convey. But he had many qualities the man of letters would do well to imitate. He was essentially a modern man. He was familiar with the past and loved many things about it; but he was "up to the times" in the fullest sense, in science, in theology,

in politics. He looked forward and not back; it cannot be too often emphasized. Besides this, he was a lover of truth and had his eyes open to seek it. In this he recalls another great writer, who from some points of view may serve as the model man of letters, Goethe. He it was who wrote that sentence which should be the motto — one of the mottoes — of every one who devotes himself to a literary life: "*Wahrheitsliebe zeigt sich darin, dass man überall das Gute zu finden und zu schätzen weiss.*" Love of truth, hatred of insincerity and sham, whether it means courting vulgar tastes or shouting party watchwords, openness, sympathy, — these are, above all, what the man of letters should cultivate in this or in any other country. But here, where, in the uncertain state of creeds and churches, he becomes a

sort of guide, priest almost, he should seek these things with all his heart and soul, at the same time with a clear, though somewhat melancholy, consciousness that other things will not be added unto him.

I often ask myself — probably many others do likewise — what will be the first really great original literary development of this country. I suppose no one will claim that we have, as yet, done anything worthy of our name and position in history. We have had many good authors here and there, but none of the first calibre or scope. Will the coming writer be a novelist? Certain things seem to indicate that the novel, at least in the ordinary form, has for the present had its day. Genius can do anything, but it is difficult for common minds to see how any new departure in the way of

a novel is possible. And it is safe to predict — now — that the coming writer will not be in the closest sense a realist, — if anybody can say what that sense is.

Will there be a grand revival of the drama? It is difficult to imagine. In spite of some signs of improvement on the American stage, the conditions are unpromising. The supremacy of the “common-schooled” is felt far more in the theatre than in the publishing house. More than that, the theatre would seem to demand a metropolis for its successful development. It is essentially dependent upon a local atmosphere. Plays intended for a dozen capitals cannot take hold like those written for Paris. It is also argued that stage-settings are killing the drama. About that there may be more question. But it cannot be de-

nied that there exists a separation between actors and managers on the one hand and the literary class on the other, which makes a truly literary drama seem almost hopeless.

Well—and poetry? Some people think poetry has disappeared from the world forever. I am not of that number. The enjoyment of metrical form, and the peculiar excitement of style that goes with it, do seem at a low ebb among our practical countrymen. But it has been so before. It was so in the dark ages, when the world was barbarous; it was so in the later Roman age, when the world was barbarous from over-civilization,—as it is now. But there comes a Renaissance for all these things. The Muses are, perhaps, the only deities who do not at length abandon the children of men.

Yet it is not poetry that most often suggests itself to me as the regenerator of our literary reputation. I cannot but think that the form of art which would at once be most akin to certain feelings of our people, and would also be compatible with the demands of literary excellence, would be some great work of humour, of laughter. We are too serious, we take ourselves too seriously, our vices and our virtues too seriously, life too seriously. The defect of such a writer as Whitman is that he cannot see in how many respects he is an enormous joke. We have had humourists, it is true. I am not sure but that their writings form to-day the most original and characteristic literature we have; which is not very creditable to us, for they are extremely vulgar and extremely superficial, whereas the truly great literary

humourist is free from all vulgarity and profoundly deep. But some day, before many years,— he may be among us now,— there will come a true son of Aristophanes and Rabelais and Cervantes, who will prick the bubble of our vast self-satisfaction, without bitterness, without harshness, with none of the cynical satire of the French pessimistic school. His first principle will be laughter, but his second will be love; and he will show that we must take this good world as we find it, not complain because it is not better, nor wear all the joy out of ourselves trying to make it better. He will ridicule a great many things: politics, and patent medicines, and temperance societies, and woman's rights, and reform generally. He will tread on a great many people's toes, and turn the world upside down, and

make us see the great glories of this bustling age insignificant and jumbled together like the glass in a kaleidoscope. He will spare no one, yet every one will love him, because he will be lovable, which is, after all, the best reason for loving in the world. And I should advise him to inscribe on his title-page these charming verses, which I borrow from M. Anatole France, who has himself borrowed them from I know not where, —

“ Les petites marionnettes
Font, font, font
Trois petits tours
Et puis s'en vont.”

THE AMERICAN OUT OF DOORS.

WE are too prone to look at modern life as cut off from the past by a great gulf: it is so much more important to us. A Greek, a mediæval Italian, seems spectral, impossible. We cannot realize that Athenians and Florentines loved and hated, bought and sold, jested, wept, talked scandal, suffered and died, quite as men do nowadays. The world is so old and yet so new. These same commonplaces I am writing have been written so many times before and seemed just as common place. Yet we forget them.

Notwithstanding, certain differences, marked differences, do separate the nineteenth century from the past. Great forces have worked to mould our civilization, some of them external and material, yet even these reacting on the internal and spiritual, as the external, to a greater or less degree, always must. To go some way back, there is printing, a force that made itself felt long ago; but the development of printing in the daily press is something absolutely modern, and who can estimate its importance? Then there is democracy, closely connected with the preceding; the belief that the numerical majority of mankind is not only entitled to equal consideration by government, but competent to control that government, almost, if not quite, directly. Again, we have the great mechanical

discoveries, which fall within the last hundred years: steam, the breaker-down of barriers, the annihilator of nationality, the agent that has tripled man's control of nature and drawn tighter the girdle of the world; electricity, which already regards telegraph and telephone as trifles, and looks forward to producing in another century a locomotive power that will make us cast steam into a corner, forgotten.

There are spiritual influences, too, subtler and harder to investigate, which may be considered either as cause or as effect. For instance, there is the extraordinary development of music, which in the modern sense can scarcely be said to be three hundred years old: music, so different from all the other arts in its combination of sensuous appeal with

supersensual suggestion; so quick to profit by mechanics, yet so far above them; so capable of expressing all moods and all passions; so various in its methods and styles; in a word, so pre-eminently modern. Another influence, quite as modern and even more powerful, is the love of nature. Perhaps I should say, the scientific study and comprehension of nature. Neither expression by itself is sufficient.

All literature and history prove that the character of a people is largely modified by the topography of the region it inhabits; and the extremes to which a theory based on this is carried by Taine and critics of his school are well known. Most nations have been conscious of the part thus taken by their surroundings in their moral development, and have

recognized it in one way or another. This is, however, quite different from scientific study. Observation, the patient search after facts, seems to be a late fruit of civilization, a fruit that was very long in ripening. Socrates, at least in Xenophon's report of him, anticipated Pope in proclaiming that "the proper study of mankind is man." Aristotle, with his immense curiosity, discovered and recorded many things; but the natural history of the ancients is largely fabulous and *a priori*, as in the elaborate work of Pliny; and the mass of deduction and hearsay transmitted by that industrious personage influenced the science of the Middle Ages to an astonishing degree. Those who are familiar with Elizabethan writers are well aware of this. The extravagant zoölogy and botany which formed an

important element in the style of Lyly and the Euphuists have been frequently ridiculed. Even Shakspeare is by no means free, as in his

“ Sweet are the uses of adversity,
Which, like the toad, ugly and venomous,
Wears yet a precious jewel in his head.”

But patient scientific study had not been wanting in the Renaissance, amid all the riot of the imagination. The great voyagers and explorers, although they brought home new fictions of their own, yet destroyed many of the old. Copernicus had revolutionized astronomy, and even among the Elizabethans his discoveries were beginning to have their effect on the literary world. Bacon laid the foundation of modern scientific methods, and the temper developed rapidly, as we see in Browne's book on Vulgar

Errors, which admits some extraordinary conclusions, but shows a true spirit of curiosity, of critical research, and of respect, at least, for thorough experiment.

In the eighteenth century such a spirit spread everywhere, as reason began to supplant imagination, and poetry to give way to prose. The eighteenth century was, however, too busy with political and social problems to concern itself seriously with great scientific movements. Philosophy and political economy, the study of man, took precedence of the study of nature. With the nineteenth century the latter pursuit finally asserted itself. The great mechanical inventions and practical applications of science increased the facilities for theoretical investigation, and made it more attractive. The theories elabo-

rated by Darwin were, as is well known, in the air some time before he formulated them. He is but the representative of his age, at least in that direction; nor would it be possible to find a better example of the ideal scientist than he. Patient, spending years in the accumulation of facts, never hastening, never fretting, putting results as far as possible out of sight that they may not tempt him from severe and unprejudiced investigation, working for no end of practical utility, and for fame only carelessly and as a secondary object, such a man personifies the best that nature has to teach us. We learn from him respect for details that seem insignificant; we learn not to jump at conclusions; we learn once more the lesson — alas, so often forgotten — of Newton, “picking up a

shell here and there on the beach, while the vast ocean of truth lay open before him." Darwin is perhaps too favourable an example of the naturalist's modesty and simplicity, but familiarity with nature appears to breed these qualities more than some studies peculiarly associated with man.

What could be more important than the change produced in our view of the external world by the theories which are generally connected with Darwin's name? A French critic writes: "Is it preposterous to say that posterity will draw a line, a deep line, in the history of human thought, between the men who lived before and those who lived after Darwin? It is somewhat as the change that was formerly brought about by the discovery of America and of Copernican cos-

mology." Whether this feeling be true or false, it would be foolish to deny the immense hold it has taken on men's minds. We may not formally accept the principle of evolution, but we are all of us inclined to put man in a very different position in nature from the one he occupied a hundred years ago. He is no longer a little god, with the rest of the universe prostrate at his feet, but takes his place among other beings, an essential element, — the most essential, possibly, but still only an element in the vast play of the organic and inorganic world. Nor is this view contrary to philosophy as distinguished from science, though the conclusion may be reached along a different line. To the Hegelian, as to the Darwinian, man has ceased to be cut off and dissociated from nature; she has no

reality but in him, yet neither has he reality but in her. It is evident that to a man who has accepted these doctrines the external world assumes a new aspect: it is no longer something indifferent, or an enemy to be kept under and controlled; it is an inexhaustible store of facts, each bound up with others and bearing upon them, each pregnant with its own teaching, and perhaps with a lesson that no man can afford to overlook or neglect.

I believe this new growth of interest in nature is nowhere so widespread as among the people of the United States. The Teutonic and Keltic races seem to take to it more readily than the Latin, and even than the Greek. Greek poetry is full of allusions to natural objects, but these are almost always referred to in illus-

tration of human passions. The gift of painting in clear lines and with imaginative feeling, as we see it, for instance, in Theocritus, which is characteristic of the divine Greek genius in everything, must not be confused with the love of description which has become conspicuous in modern literature. Occasional touches of outdoor life with an exquisite charm are to be found in Lucretius, in Catullus, in Virgil; but here, too, everything is subordinated to man. It has been observed that to the Romans Switzerland was merely desolate and repulsive, which is enough to show that they had not the modern sense of the picturesque. A somewhat careful study of the Italian poet Leopardi has convinced me that he had nothing of the peculiar sentiment of nature-worship so

striking in his contemporaries, English, French, and German. Nor do we find it in the great poets of Spain, if a conclusion on the subject be permitted to one who has only entered the skirts of the great forest of seventeenth-century drama. The plays of Calderon are full of roses and waves and winds and nightingales. It would be hard to surpass the melancholy and Virgilian grace of his flowers, —

“Durmiendo en brazos de la noche fria;”

but one does not find in him that subtle observation combined with imaginative colour which abounds in Shakspeare: —

“A mole cinq-spotted, like the crimson drops
I’ the bottom of a cowslip.”

“Daffodils,

That come before the swallow dares, and take
The winds of March with beauty.”

The love of the Kelts for nature, and their method of interpreting her as compared with the methods of other races, are admirably analyzed in Matthew Arnold's *Lectures on Celtic Literature*, one of his most charming books. Whether it be indeed owing to a difference of race instinct, or to the close contact with the material world induced by the necessity of combat with it, the northern nations of Europe are certainly more familiar with that world than those of the south.

Familiarity with nature takes two forms, one exoteric, the other esoteric: either nature is viewed in detail, as an object of endless interest and amusement, or she is deified with a passionate and religious adoration. The first of these forms is probably more general in the United

States than it has ever before been anywhere. No other people read as we do the current literature of the day, newspapers, magazines. But that literature is kept full of scientific speculation in every form. It is in the air all about us. We imbibe the chief fact of evolution from our infancy, and look upon monkeys with a weird interest and a superstitious eye for ancestral traits. The discussion of these matters is not confined to scholars and professors; one hears it every day among men of business, even among mechanics.

We are a nation of travellers. We are not rooted and moss-grown, like Europeans. Moving house and home is the excitement of life, and a man who dies where he was born is a curiosity. Men and women work hard all their lives, and at sixty set out to

see the world. They go to California or Mexico or Alaska for six weeks, like it, and make a journey to India. In one sense, this perpetual locomotion cuts us off from nature. It interferes with the forming of associations. It abolishes the peculiar kinship that knits up some fact of the past with every tree and stone, making old houses seem like old faces well beloved. I do not think any of our people have the attachment which, it is said, in some European countries binds the peasant to the soil; nor indeed have we a peasantry, in the European sense, anywhere within our borders.

Yet if our acquaintance with nature is not intimate, it is extensive. In almost every company you will find people who are familiar with the swamps of Florida and the prairies

of Kansas, the Rocky Mountains and the Yosemite Valley. It is important to note that in our American journeying, at any rate, we look especially at such natural objects because nothing else is new. From Boston to San Francisco man is substantially the same. Variety must be sought in nature. Curiosity can spend itself no longer on manners and customs. If we look from the car windows, we have no eyes for the eternal John Smith; he stands for insignificance in the foreground of the picture. The feeling thus fostered is, indeed, often shallow and idle. These universal sight-seers have no reverence, not even a spirit of thoughtful and sober inquiry. The scenery they are whirled through becomes a panorama, a theatrical spectacle, and their only impulse is a longing for some higher

mountain, or broader river, or wilder valley, to rouse dull eyes once more into a languid enthusiasm. They have a catalogue, a collection of objects of interest, and compare notes: "Have you been there?" "Oh, you ought to see that!" Yet an effect remains. Petty prejudices and provincial notions are partially obliterated. You cannot come in contact with nature even in this superficial way without gaining something of her largeness and her calm. There is a gain of sympathy, also. Perhaps we are not naturally a sporting people, like our English cousins. If we are so, we have lost the taste to a great degree, and acquired a dislike for shooting, even for fishing. We prefer to live and let live, with beast as well as man. A simple walk is enough for us; the sight of birds and

animals pleases us more than the destruction of them. We love the open air for itself, and are contented with it. How many of us revel in that joyous cry of Emerson, "Give me health and a day, and I will make the pomp of emperors ridiculous"!

This sweet, fresh renewal that comes from contact with nature is felt even by people who have little imagination or sensibility, who abhor solitude, and certainly would not choose the country as an abiding-place. In summer the whole population flock to the mountains and salt water, and they are not quite the same there as at home. Mr. Bradford Torrey, in his charming *A Rambler's Lease*, says: "I hope I am not lacking in a wholesome disrespect for sentimentality and affectation; for artificial ecstasies over sunsets and landscapes, birds and flowers; the

fashionable cant of nature-worship, which is enough almost to seal a true worshipper's lips under a vow of everlasting silence." Certainly there is a great deal of such cant, and the canter is only too apt to go away and forget what manner of man he was. Yet even the lightest, the most frivolous, the most hardened, get something from these things. The very existence of the fashion shows a tendency.

A large class of people do, however, take the matter more seriously. The scientific views I have referred to above give the study of nature an interest which strikes deeper than a mere desultory curiosity. There are many men and women who have picked up a smattering of botany or ornithology in childhood, and find it afterwards a never-failing occupation, opening new vistas and revealing deep

secrets, always within reach and always fascinating. Careful study of this kind sometimes breeds a contempt for large effects, keeps the eyes near earth on microscopic beauty; but how close it brings one to the intricate mystery of life!

Science, too, has the great advantage of being accessible in fragments, and not requiring lifelong familiarity for the appreciation of its pleasures. It is different from literature, which demands a patient apprenticeship, and is not open to the first comer. A busy man can see a great deal out of doors to interest him at odd moments; but he is not likely to make close friends of Homer and Dante.

I have not, I think, exaggerated the importance of what external nature has done and is doing for Americans; but it may be exaggerated by confus-

ing the two forms of familiarity with natural objects that I have noted above. One hears a good deal of talk about the religion of nature, about a worship which will put aside churches and go into the woods, about a reverence which will associate itself more deeply and truly with trees and flowers and stars than with buildings fashioned by the hand of man, about a devotion bred by quiet in the fields rather than by liturgies or outgrown creeds or dim cathedrals. We must distinguish here. At the opening of this century, in the passionate reaction against the social and religious conventions of the last, poets and men of letters were strongly moved to substitute for certain traditional theories of religion a deeper, ampler, and vaguer sentiment. Beginning with Rousseau, this tendency spread to

many men of a quite different stamp. The poets of England, France, and Germany poured forth upon natural objects all the ecstasies of lovers. The beauty of colour, sound, motion, filled them, mastered them. They lost themselves in the sway of great winds, in the slow majesty of midday clouds, in the undulation of grass floating in the summer light. English poetry will show us this better than any other. Let us take Cowper, still timid, still Christian in the sense that made Sainte-Beuve say, "The great Pan has naught to do with the great Crucified One," yet striking again and again notes passionate as this: —

"Lanes, in which the primrose ere her time
Peeps through the moss that clothes the haw-
thorn root,
Deceive no student;"

or Keats crying to the Nightingale:—

“Now more than ever seems it rich to die,
To cease upon the midnight with no pain,
While thou art pouring forth thy soul abroad
In such an ecstasy;”

or Wordsworth:—

“The sounding cataract
Haunted me like a passion;”

or Byron:—

“I live not in myself, I become
Portion of that around me; and to me
High mountains are a feeling;”

or, above all, Shelley, who drank more
deeply than any at the spring of

“that sustaining love,
Which, through the web of being blindly wove
By man and beast and earth and air and sea,
Burns bright or dim, as each are mirrors of
The fire for which all thirst.”

These poets, each in his own way, threw themselves into nature. They were ready to say with Keats's Uranus, —

“My voice is but the voice of winds and tides.”

This feeling was to them, indeed, a religion. Yet in one form or another they all looked “through nature to the God of nature.” They felt everywhere the presence of some divine mystery which was open to them in the sweet language of the natural world. Some kind of union with this they sought passionately; and the imperfection of what they were able to attain filled them with sadness, with the delicate melancholy which is an important feature of their work. The religion they cherished was a high and mystical pantheism; only it is essential to bear in mind the profound saying of

Goethe, which should never be forgotten when pantheism is in question: "Everything Spinozistic in poetry becomes in philosophy Machiavelism." That is to say, the contumely which universally attaches to pantheism soberly maintained as an intellectual theory is quite out of place in judging poetry, where the same thing is present as a desire, not as a creed.

Now, this element of passion, of intense religious emotion, does not, I think, belong to our American love of nature. Even in England there has been a change in the last half-century, a change not enough insisted on. The difference between the poetry of Shakspeare and that of Dryden is not greater than the difference between the poetry of Byron and Shelley and that of Tennyson and Browning. With the former, intense,

absorbing personal feeling is everything. With the latter, there is a complete effacement of personality. Different as are Tennyson and Browning in other respects, in this they are alike; and though it would be a mistake to say that passion is never found without the intrusion of the poet's own personality, the lack of passion is unquestionably the most marked defect of both these great poets. Certainly it is the defect in their rendering of nature. With Tennyson, external nature becomes a mere means of elaborate ornamentation; with Browning, it is generally subordinated to the analysis of humanity: in neither poet have we the peculiar charm of the generation before.

In America, have we ever had passion in any branch of literature or art? It must not be forgotten that most of

our great writers have come from Puritan stock; that is, from just that portion of the English race which had the least imagination, the least sensibility; which was the most profoundly penetrated with the moral view of things; which mistrusted most profoundly any self-abandonment, any compromise with the devil. A hundred years hence, the mixture of German, French, Irish blood will have changed all this. The change is going on; but up to this time Puritan rationalism has predominated in the view of nature as in most other things. Take, for instance, Thoreau. No one could be a more devoted observer of nature; no one could record more carefully her subtlest changes, her moods serene or stormy, her infinite variety. His knowledge of natural history was, I suppose, ten times

wider and more accurate than that of Shelley or Keats. But where in Thoreau do you find touch or trace of the passion we have seen in them, the enthralling, absorbing worship—call it pantheism, or what you will—that pants and burns in Keats's *Nightingale* or Shelley's *West Wind*? Without any assumption of pessimism, it may be said, as I have hinted above, that one of the greatest charms of nature in these poets is the subtle and inexplicable melancholy that attends her; the vast and fleeting storm of intangible suggestions and associations that wait on a single simple sound or odour, and vanish before we can half imagine what they mean, as when Obermann writes, "The jonquil or the jessamine would be enough to make me say that such as we are we might sojourn in a better world."

Penetrated with feelings like these, one comes to Thoreau and finds him proclaiming, "The voice of nature is always encouraging."

The truth is, that for Thoreau, as for his master, Emerson, Puritanical stoicism has set up a barrier that cuts him off from half of life. His creed is not a conceited or presumptuous one, — it is too dignified; but it sets the man on a pinnacle of self-satisfaction, which inclines him rather to identify nature with himself than himself with nature. One hears Thoreau constantly saying, "Nature is delightful, delightful to me, Henry Thoreau." He patronizes her. Now, this is inconsistent with passion of any kind. To a man of that temperament the study of nature may be an amusement, even an interesting, absorbing occupation; a religion — never! This is

precisely the state of the case, not only with Thoreau, but with most of our American poets, and with the greater number of the men and women who are to-day engaged in ransacking the fields and woods for facts of natural history.

With the love of nature, as with so many other things, the saying is profoundly true, "Unto every one that hath shall be given." We get back only what we give. As a humanizing influence, as teaching patience, tolerance, sympathy, the scientific appreciation of the natural world, the intimate and daily contact with it cannot be overestimated. But to think that these things will ever replace religion or poetry; to believe that the senses of the average man, though backed with all the botanies and ornithologies ever written, will

perceive as do those of the poet, will create for themselves the energy and intensity of feeling, the glow of imaginative colour, the throng of associations, which he can call forth in a moment, in the twinkling of an eye, is to be profoundly mistaken.

THE SCHOLAR.

THE true scholar is something quite different from the man of genius or the mere writer. The genius in literature, as in other arts, is intent upon fame, —

“the spur that the clear spirit doth raise.”

The keen goad of his inspiration urges him, above all things, to create, not to acquire. Whatever he takes from others is simply assimilated, to be reproduced in a new mould and metal of his own. Some geniuses have, indeed, been scholars, — Dante, Milton, Leopardi, Coleridge, — but by an accident almost in their natures rather than as a result of their creative power.

The writer, on the other hand, the modern man of letters, is generally anything but a scholar. The mass of matter which he pours out upon the world in the shape of magazine articles and essays requires a certain breadth of information, if he is anxious to pursue his calling honestly. But that information is apt to be heterogeneous, gathered from a vast number of books on different subjects, reviewed hastily, and cemented together by a school knowledge of standard authors now and then brushed up and put in order. In fact the specialist is so cut off from the general public, which detests specialties, that a man cannot be thoroughly grounded in one subject and be a popular writer at the same time.

But the true scholar, the real devo-

tee of learning, hardly cares to be a popular writer. The ephemeral gleam of fame has rarely charm enough to lure him from the nook where he has ensconced himself in the half-lighted caves of thought. It is difficult for him to conceal his indifference, or even contempt, for the *ignobile vulgus* and the easily excited, easily diverted curiosity of the magazine world. The goddess he serves is so austere, so thickly draped in the dim robes of mystery, that he half shudders when one more venturesome among his colleagues lifts a corner of the veil and exposes a secret to the vulgar stare of the uninitiated and undeserving.

It will easily be seen that the conditions of American life are not over favourable to such men as this. Yet they are to be found here and there,

and cannot be wholly crushed out. The tradition of their race has persisted unbroken in far more trying circumstances. It winds down in labyrinthine obscurity from the starlit plains of Chaldæa and the first astronomers; it passes through the quiet groves of Academe; it lingers among the yellow papyri of Alexandria; it hides its head in the Middle Age among gray cloisters, poring over scattered golden relics of Greek wisdom instead of missal or vulgate; it runs riot through the Renaissance, mingling together the rites of Pallas, Bacchus, and Apollo; it walks among us to-day in men we half honour, half laugh at,—the treatment which has fallen to the scholar's lot since there have been scholars at all. How little he cares! With his eye turned inward, "coming upon many ways in the wan-

derings of careful thought," how little he cares for the ridicule of the world or its respect!

There is one scholar, however, who does not hide his head in the nineteenth century—quite the contrary; and that is the scientist. In some respects he may be considered the typical scholar of to-day, and some people would look upon him as the natural result of evolution from the scholar of the past. At any rate, he, too, is devoured by the passion for knowledge; only in him it takes form rather in the study of nature, and man as an element of nature, than in an investigation of matters concerning the human intellect alone. This very fact of the clearness and sharp definition of the scientist's object takes something away from the mystery of his worship. Nature is to him merely

a museum out of order, which he is to arrange and classify, and so often he has an air of patronage, as if it were really very kind of him to do it. Altogether, men of science are too full of the pulse of modern life, too active, too practical to stand well for one's ideal of the scholar. And yet to succeed they must have many of his qualities: his patience, his enthusiasm, his infinite self-sacrifice, his readiness for martyrdom even, in the cause he serves. One has only to read the life of Darwin to be convinced of this.

The scholarship of the past, however, the scholarship which to-day lingers unknown in corners, has little to do with science or the external world. It has an old and worn-out prejudice to the effect that "the proper study of mankind is man," the thoughts

of man and the products of his thought. With its eye turned inward this scholarship passes unheeding and indifferent by the loveliness of nature and the mysteries of her existence, in regard to which it is quite content with *a priori* views. It busies itself perhaps with metaphysics, culling wisdom in Plato, or uprooting it in Aristotle and Hegel; or with mathematics, that highest form of intellectual harmony, covering sheet after sheet with endless computation and cabalistic figures; or with philology, tracing the riotous dance of sounds and words from tongue to tongue, or making conjectural emendations in texts that have been thumbed and worn by the brains of thousands long before. But in all these varying forms the basis is the same, an all-absorbing passion for

the pursuit of knowledge on the serene heights of thought, a devout abstraction from the cares and interests of active human life, a love of solitary contemplation, which in the intellectual world can only be compared with the rapture of the Brahmin in the spiritual. Who can understand it but the adept, the joy of those solitary midnight hours, when drowsiness has given place to the second and intenser wakefulness, when there is no disturbing sound but the ticking of the clock, and it may be the rumble of a distant train, when it seems as if one could really make books into living persons, and come, oh, so much nearer to them than to the very nearest of one's friends who really live.

This abstraction of the scholar's reacts upon his life everywhere, as is natural. If he has the genuine zeal

of his profession, he looks upon himself as a priest almost, serving a high and exacting divinity, elevated by that service above the common interests of mankind. This lofty office of the scholar was often dwelt on by Emerson. "The name of the scholar is taken in vain," he says. "We who should be the channel of that unweariable Power which never sleeps, should give our diligence no holidays. Other men are planting and building, baking and tanning, running and sailing, heaving and carrying, each that he may peacefully execute the first function by which all are helped. Shall he play, while their eyes follow him from far with reverence, attributing to him the delving in great fields of thought and conversing with supernatural allies." But the true scholar needs no exhortation to the performance of his duty.

It is a passion with him. Every diversion, every necessary call of the human relations of life, is a hindrance, to which he submits with vexation and from which he escapes as soon as possible.

It is for this reason that the scholar, if he has his health, is better off unmarried. In the first place, he cannot afford to be rich. The cares and annoyances induced by money are to him abominable and not to be endured. If he accumulates or inherits wealth, he is so apt to become that thing, of the true scholar most hated, — a dilettante. There may have been great scholars who have been rich, but they are rare. Nay, even the distractions of bread-winning — in teaching, for instance — interfere less with these pursuits than the alien and haunting anxieties of wealth.

But marriage to the poor scholar is but another name for misery. Other men do their business during the day away from home, and at night it is their leisure and pleasure to withdraw into the quiet sweetness of family life. But the scholar must either work at home among the thousand disturbances that make consistent application impossible; or, if he goes away from home, half of his energy is taken from him. He is in a strange place, among strange faces, using strange books. And he is haunted all the time by the privations of wife and children at home.

No, the heights of Parnassus are cold and lonely. The intellect is isolating. It is tyrannical. If you give it anything, you must give it all: heart and soul and strength. It will not tolerate half-service.

And then, if one may dare to whisper it in these days, it is better for the scholar not to marry, because women are not scholars and have little or no sympathy with the passion for knowledge pure and simple. This does not apply to men of letters, to whom the sympathy of women in one form or another is almost indispensable. To them women are willing and ready to give it. The artistic side of human nature, the passion for beauty, they can enter into largely. They can enter into the passion for fame, longing for it as enthusiasts, not on their own account, but for those they love. But oh, so rarely, not more than once or twice in a lifetime, does one see a woman who loves thought and study for themselves. In Walter Pater's *Sebastian Van Stork* there is a hint of this: "His mother

expostulated with him on the matter, —and she suggested filial duty. ‘Good mother,’ he answered, ‘there are duties toward the intellect also, which women can but rarely understand.’”

Nevertheless, human nature must unbend; even the scholar must have his recreation and amusement, but oftentimes it is of a singular nature. For associates he loves those of his own kind, of his own specialty, so that he may share with them little momentary jottings, may carry into his diversion the preoccupations of his graver hours, may season the passing jest with a line from Horace or a somewhat broad pun from Aristophanes. And the diversion he seeks seems at first inconsistent enough with his tastes. It must be as external, as unintellectual as possible. He loves

to ramble through the streets with a congenial spirit, to gaze idly into shop windows and read old signs, to criticise women's dress, — everything which attracts the eye and soothes the mind. If he goes to the theatre, he does not want Shakspeare or Ibsen. Gilbert and Sullivan suit him better, or even something approaching horse-play. With women it is the same. Blue-stockings and school teachers he abhors. He wants what is young, fresh, full of animal energy and gayety, jests, mockery, of himself, even, if need be. When he comes out of his solitude he wants nothing to remind him of it, nothing external at least, only an occasional reminiscence welling up from his own thoughts.

So, in a manner, the scholar's life is one apart, separate from that of other men. It is perhaps more so in

this our hurried and hurrying American world, but it has always been so. The scholar is no misanthrope; but he soon becomes aware that other men regard him rather with respect than affection, and he schools himself to it. They have no interest for him except as affording him an hour's relaxation, like some painted, lifeless show, which makes no impression on his soul. From the very beginning he feels this. For the passion for knowledge, for pure acquisition, is born in him, a passion so mighty and resistless that it overwhelms all barriers and accidents of fortune and sweeps him onward in its course whither it will. Nor does any rebellious instinct prompt him to oppose it. There is no deity so imperious, so all-controlling. But her force comes from her charm. Her siren seductiveness has

no limit, no alloy. It enthralls youth, it bewitches age. Still, still she calls, urging the wanderer out into the trackless sea of thought, to which there is no bound, from which there is no return.

The uninitiated, the profane, can appreciate results, but they abhor details. They would gladly discover a new manuscript of Aristotle, or a law of evolution; but they recoil from the endless accumulation of knowledge little by little, the patient observation, the infinite pains. To the scholar the delight is in the means as much as in the end. A happy conjectural reading or the discovery of a new microscopic insect fills him with as much joy as any conclusion to which these things may lead. It is the constant, restless application of mind that he seeks. So the matter worked on be

congenial, he cares but little for the result achieved. He loves the atmosphere he works in. If it be Greek texts, he is unconsciously penetrated with the spirit of his author. Homer and Sophocles become to him necessary companions. If he is a naturalist, even in the minutest research he is in contact with the vast, loving personality of nature. He cannot be without her or away from her. Shut up in cities his life is miserable.

Yes, it is a religion, this worship of knowledge, — perhaps the last religion of a certain class of minds, who have abandoned definite creeds and shut their lives up in the sweetness of this one worship, which most of all takes them out of themselves. For there is a sweetness in it, an intoxication. Old Burton, himself a typical scholar, says of it: “Such is the excellency of

these studies" — he is speaking of mathematics — "that all those ornaments and childish bubbles of wealth are not worthy to be compared to them: *crede mihi*, saith one, *exstingui dulce erit mathematicarum studio*; I could even live and die with such meditations, and take more delight, true content of mind in them, than thou hast in all thy wealth and sport, how rich soever thou art. . . . The like pleasure there is in all other studies, to such as are truly addicted to them: *ea suavitas* (one holds) *ut, cum quis ea degustaverit, quasi poculis Circeis captus, non possit umquam ab iis divelli*; the like sweetness, which, as Circe's cup, bewitcheth a student, he cannot leave off, as well may witness those many laborious hours, days and nights spent in the voluminous treatises written by them; the same content."

As with all other religions, there are some devotees of this also, who are ready for martyrdom, the martyrdom of poverty, of hunger, of nakedness, of scorn, contempt, and contumely, the martyrdom of sickness and a lingering death, which attends, alas, too surely, upon the neglect of the material for the spiritual, of the body for the mind. Let me quote once more from a contemporary of Burton, himself also a robust though wayward scholar, the great and too much neglected Ben Jonson: "I know no disease of the soul but ignorance; not of the arts and sciences, but of itself; yet relating to these it is a pernicious evil, the darkener of man's life, the disturber of his reason, and common confounder of truth; with which a man goes groping in the dark no otherwise than as if he were blind.

Great understandings are most racked and troubled with it; nay, sometimes they will rather choose to die than not to know the things they study for." How many have so died and are so dying, tortured by the fierce and unquenchable desire to attain truth, so that they cannot for a moment rest or linger by the way, but still press unremittingly, unflaggingly onward, till the torch that has been burning more and more brightly is extinguished forever in the chill dampness of the grave.

Yet one hears people say that the scholar is selfish! Those who bring this charge are as often as not men of business, politicians, pushing and active in practical life, men whose whole souls are absorbed in gratifying their ambition or their greed, whose interests do, indeed, bring them in contact with other human beings, but

who do not hesitate to tread those human beings under their feet like ants, if their ambition or their greed demand it. If it be selfish to follow with entire devotion the instincts of one's nature, when those instincts do not trespass on the rights of others, the scholar is selfish. Nor can it be denied that he pursues his studies much more for his own gratification than for any useful consequences they may have to the world at large. At the same time, they do have such consequences often, and when they do not, there is an indirect influence shed by such a life of austere thought and occupation with the things of the spirit, which, burning like a quiet, pale light, pours a ray of pure sweetness on the world. The scholar is not a philanthropist. He generally cares little for charities, sometimes

not very much for churches; but the example of his high self-abandonment to an ideal is worth the stir of a dozen busybodies who seek to exalt themselves by the show of benefiting others.

The scholar is not selfish, but he is self-absorbed. And here we begin to lay our finger on his weakness. His whole energy and vitality is given to climbing the snowy sides of this high, cold mount of knowledge, and when he stands on the summit he is indeed isolated and alone. The loveliness, the charm of human companionship, have faded away from him. The natural affections have lost their power. The heart-beat of passion has ceased, and given place to thought at once feverish and cold. While the fever lasts he needs nothing, asks for nothing but the object of his enthusi-

asm. But the chill comes, and there are times when his brain is ready to burst in that vacuum of silence and the grave. This has always been the case with those who have followed a life of study; but it is even more the case to-day than ever before. Up to this century, or the last, the scholar's province was universal knowledge. He had entered a fraternity of which all the members were bound together by the common service and could meet on a common ground. Now the scholar must choose between two courses: either he attempts all knowledge and becomes a superficial dilettante; or he shuts himself up in one cavernous specialty, and the further he wanders in it the more he is excluded from cheerful day and the community of men. This evil is a terrible one and is naturally on the

increase. On the one hand, all sciences are so interdependent, "mutually folded in each others' orb," that one cannot be raised securely save on the firm foundation of all the others. On the other hand, who can be a master even of the rudiments of all? Thus the biologist argues incorrectly from lack of knowledge of metaphysics, and the metaphysician errs from his profound ignorance of biology and his haughty contempt for it.

It is these cross purposes in the world which at times do, indeed, make the scholar desperate. In his moments of zeal and hope he pushes on without looking behind him. What does he care, if he can only gain one step in advance, wrest one scrap more from the close-locked fingers of Truth? What does he care for love or sym-

pathy, if he can perform the task he has set before him and satisfy himself? But the inevitable pause comes, with its gray discouragement. Of what use is it? How little way can the search-light of thought dive into the impenetrable gulf of the unknown, yet even for that little way it is a guide so frail and so infirm! Why follow it? Why leave on one side the real goods of life — riches, quiet, ease, love, friends, content — only to wear away one's soul in the pursuit of an empty phantom, unseizable, intangible, unprofitable? And he recalls the old, old words of the Preacher: "Of making many books there is no end; and much study is a weariness of the flesh."

Yet, after all, he goes on his way and fulfils his destiny, sometimes with hope again and confidence in

himself, sometimes indifferent, sometimes with vast scorn for the futility of knowledge and the mockery of life. He goes on, on still, utterly unable to resist the overmastering intellect, which always craves and hungers after more, in the wild desire to get beyond the limits of this earthly body, to enfranchise, to depersonalize, and so to eternalize itself.

THE USE OF LIFE

BY

The Right Hon. Sir JOHN LUBBOCK, Bart.,
M.P., F.R.S., D.C.L., LL.D.

Cloth, gilt top. 12mo. \$1.25.

CONTENTS.

CHAPTER I.	CHAPTER X.
The Great Question.	Patriotism.
CHAPTER II.	CHAPTER XI.
Tact.	Citizenship.
CHAPTER III.	CHAPTER XII.
On Money Matters.	Social Life.
CHAPTER IV.	CHAPTER XIII.
Recreation.	Industry.
CHAPTER V.	CHAPTER XIV.
Health.	Faith.
CHAPTER VI.	CHAPTER XV.
National Education.	Hope.
CHAPTER VII.	CHAPTER XVI.
Self-education.	Charity.
CHAPTER VIII.	CHAPTER XVII.
On Libraries.	Character.
CHAPTER IX.	CHAPTER XVIII.
On Reading.	On Peace and Happiness.
CHAPTER XIX.	Religion.

THE BEAUTIES OF NATURE

AND

THE WONDERS OF THE WORLD WE LIVE IN.

Cloth, gilt top. 12mo. \$1.50.

“ We know of none other better fitted to present ‘ the beauties of nature and the wonders of the world we live in,’ to the popular understanding and appreciation than Sir John Lubbock, who is at once a master of his chosen topic and of a diction unsurpassed for clearness and simplicity of statement. It is a volume which the reading public will recognize and hail immediately as among the most delightfully instructive of the year’s production in books. There is matter in it for the young and mature mind. . . . One cannot rise from the perusal of this volume, without a consciousness of a mind invigorated and permanently enriched by an acquaintance with it.” — *Oswego Daily Times*.

“ It is a charming book. . . . Few writers succeed in making natural history, and indeed scientific subjects, more than interesting. In the hands of most authors they are intolerably dull to the general reader and especially to children. Sir John Lubbock makes his theme as entrancing as a novel. . . . The book is magnificently illustrated, and discusses the wonders of the animal, mineral, and vegetable kingdoms, the marvels of earth, sea, and the vaulted heavens. In the compass of its pages an immense amount of knowledge which all should know is given in a manner that will compel the child who commences it to pursue it to the end. It is a work which cannot be too highly recommended to parents who have at heart the proper education of their children.” — *The Arena*.

MACMILLAN & CO.,

66 FIFTH AVENUE, NEW YORK.

BY THE SAME AUTHOR.

ON BRITISH WILD FLOWERS.

With Illustrations. Cloth. 12mo. \$1.25.

“All lovers of Nature must feel grateful to Sir John Lubbock for his learned and suggestive little book, which cannot fail to draw attention to a field of study so new and fascinating.” — *Pall Mall Gazette*.

FLOWERS, FRUITS, AND LEAVES.

With Illustrations. Cloth. 12mo. \$1.25.

SCIENTIFIC LECTURES.

With Illustrations. Cloth. 8vo. \$2.50.

CONTENTS: On Flowers and Insects. — On Plants and Insects. — On the Habits of Ants. — Introduction to the Study of Prehistoric Archæology, etc.

“We can heartily commend this volume, as a whole, to every one who wishes to obtain a condensed account of its subjects, set forth in the most simple, easy, and lively manner.” — *Athenæum*.

THE ORIGIN AND METAMORPHOSES OF INSECTS.

With Illustrations. Cloth. 12mo. \$1.00.

POLITICAL AND EDUCATIONAL ADDRESSES.

Cloth. 8vo. \$2.50.

“Will repay the careful attention of readers who desire to be acquainted with the best thoughts of a practical and sagacious mind on the most important topics of public and national interest.” — *Daily News*.

FIFTY YEARS OF SCIENCE.

Cloth. 16mo. 75 cents.

MACMILLAN & CO.,
66 FIFTH AVENUE, NEW YORK.

MACMILLAN'S
MINIATURE SERIES.

Issued Monthly.

Price 25 cents. Yearly Subscription \$2.75.

Messrs. Macmillan & Co. beg to announce that they will issue monthly, in paper covers, beginning *May*, 1895, under the title of

“MACMILLAN'S MINIATURE SERIES”

The following popular and interesting works:

-
- | | |
|--------------------------------------------------------------------------|---------------------|
| I. Shakespeare's England. By WILLIAM WINTER | <i>May</i> |
| II. The Friendship of Nature. By MABEL OSGOOD WRIGHT | <i>June</i> |
| III. A Trip to England. By GOLDWIN SMITH | <i>Aug.</i> |
| IV. From a New England Hillside. By WILLIAM POTTS | <i>July</i> |
| V. The Pleasures of Life. By Sir JOHN LUBBOCK | <i>Sept.</i> |
| VI. Old Shrines and Ivy. By WILLIAM WINTER | <i>Oct.</i> |
| VII. The Choice of Books. By FREDERIC HARRISON | <i>Nov.</i> |
| VIII. Gray Days and Gold. By WILLIAM WINTER | <i>Dec.</i> |
| IX. The Aims of Literary Study. By HIRAM CORSON, LL.D | 1896
<i>Jan.</i> |
| X. The Novel—What It Is. By F. MARION CRAWFORD | <i>Feb.</i> |
| XI. Amiel's Journal. Vol. I. Translated by Mrs. HUMPHRY WARD | <i>Mar.</i> |
